

Hematology Case Conference

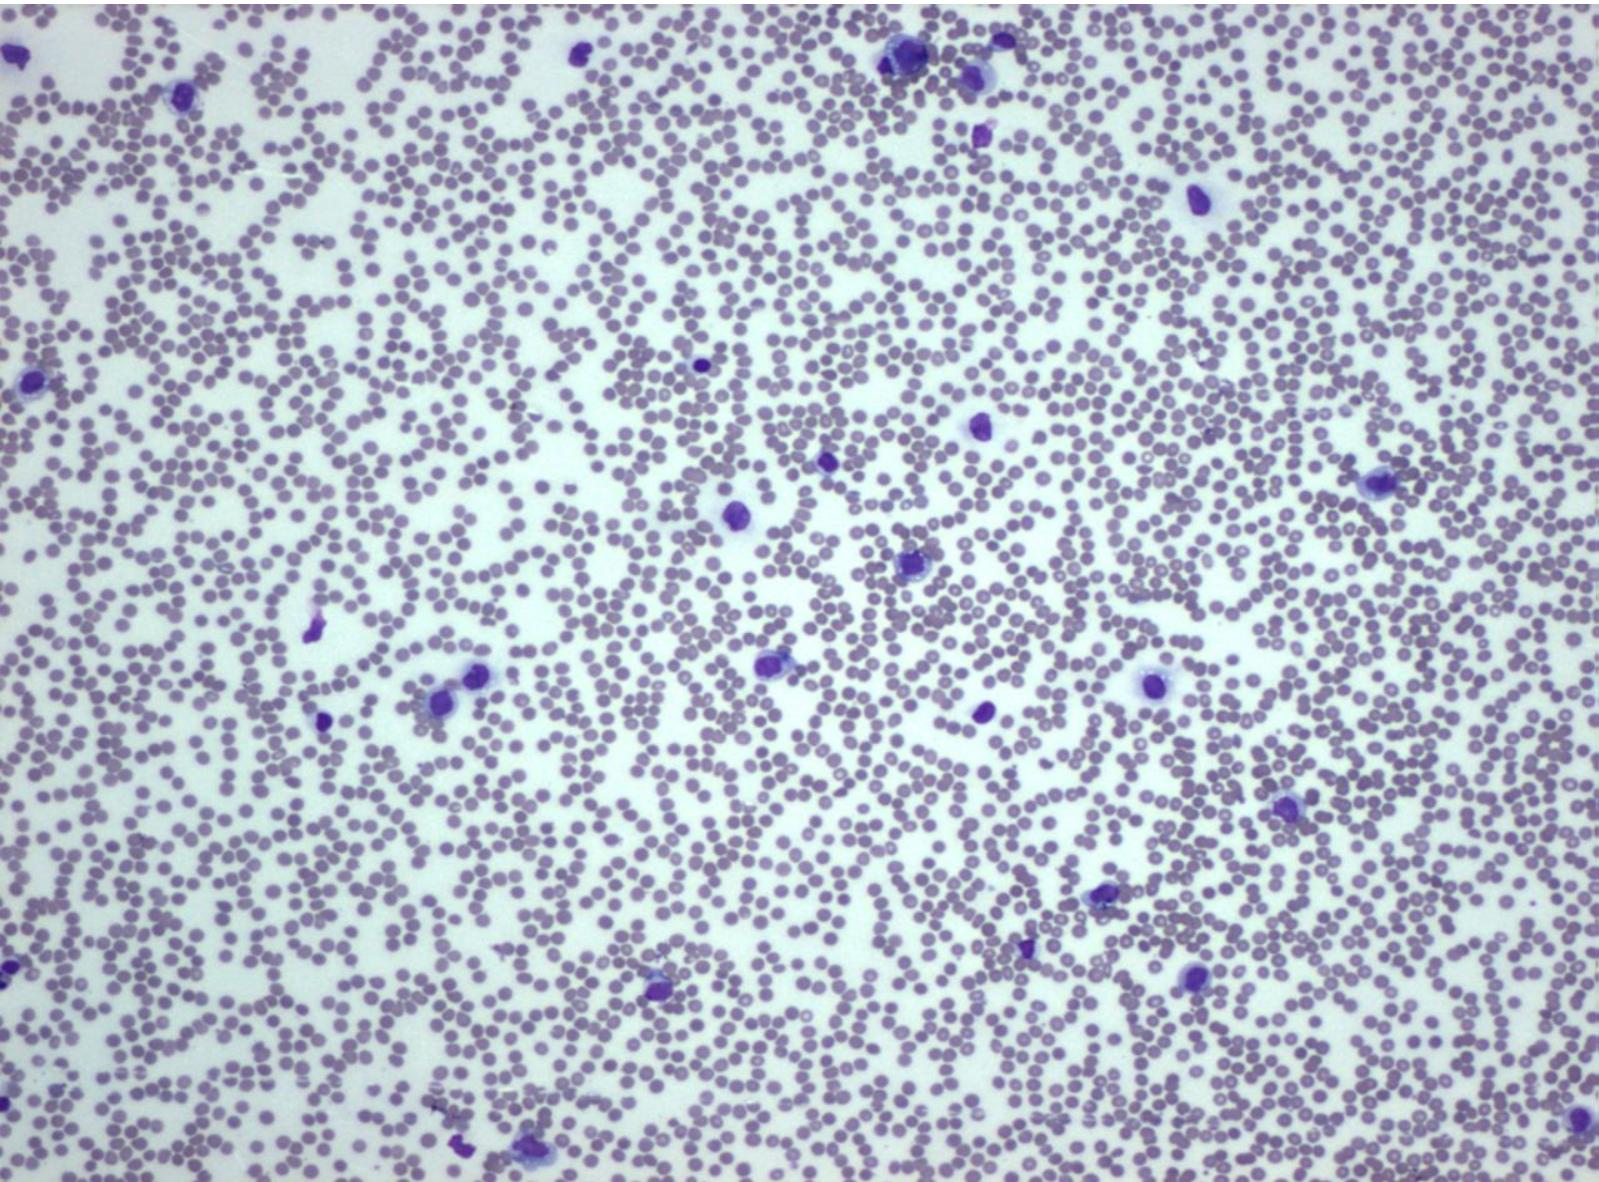

3/25/03

HB-03-24

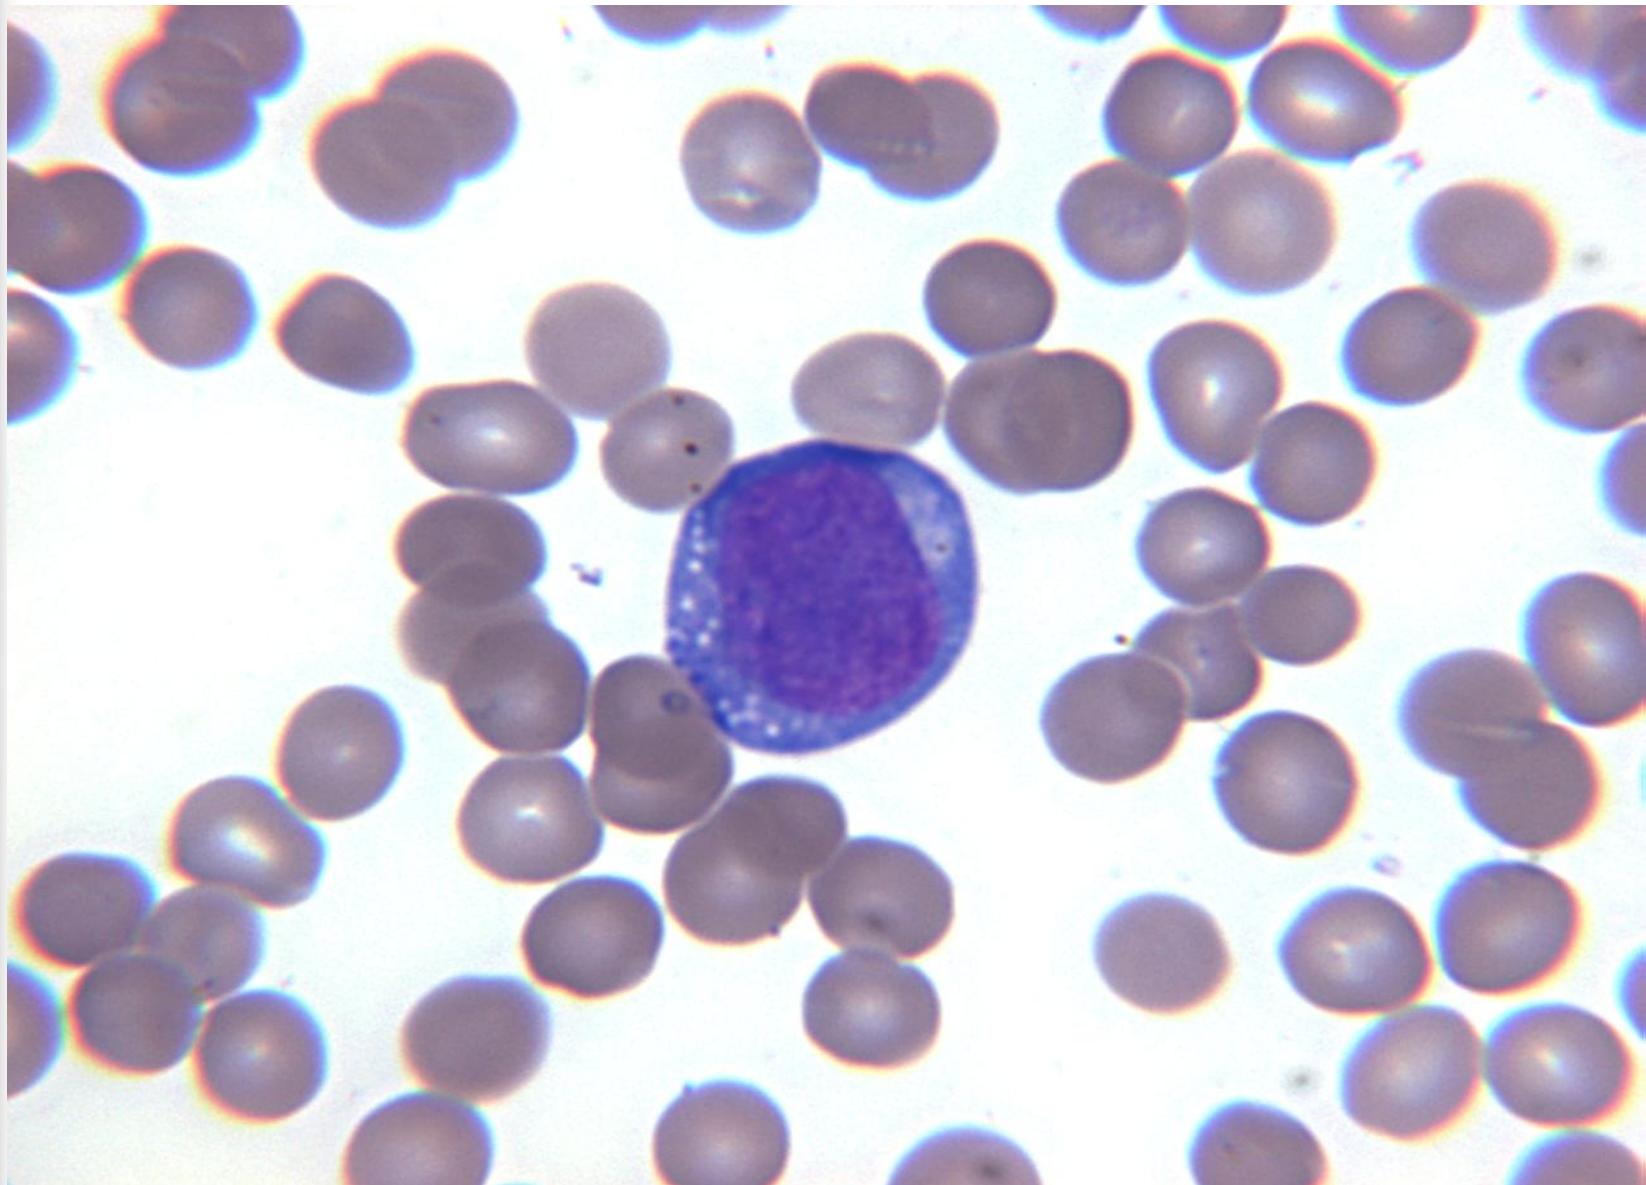

Patient Name: DAVXXXX, WANXXXX

- 52-year-old woman with fever
- WBC= 21.3, Hgb=11.4, Plt=25,000, Retic= 0.6,
MCV= 83.9
Seg 3, Band 1, Lymph 10, Mono 12, Eos 1, Meta 1, Blast 72
- Bone marrow aspirate: Blast 92, Lymph 5, RBC 3
- Biopsy 95% cellularity

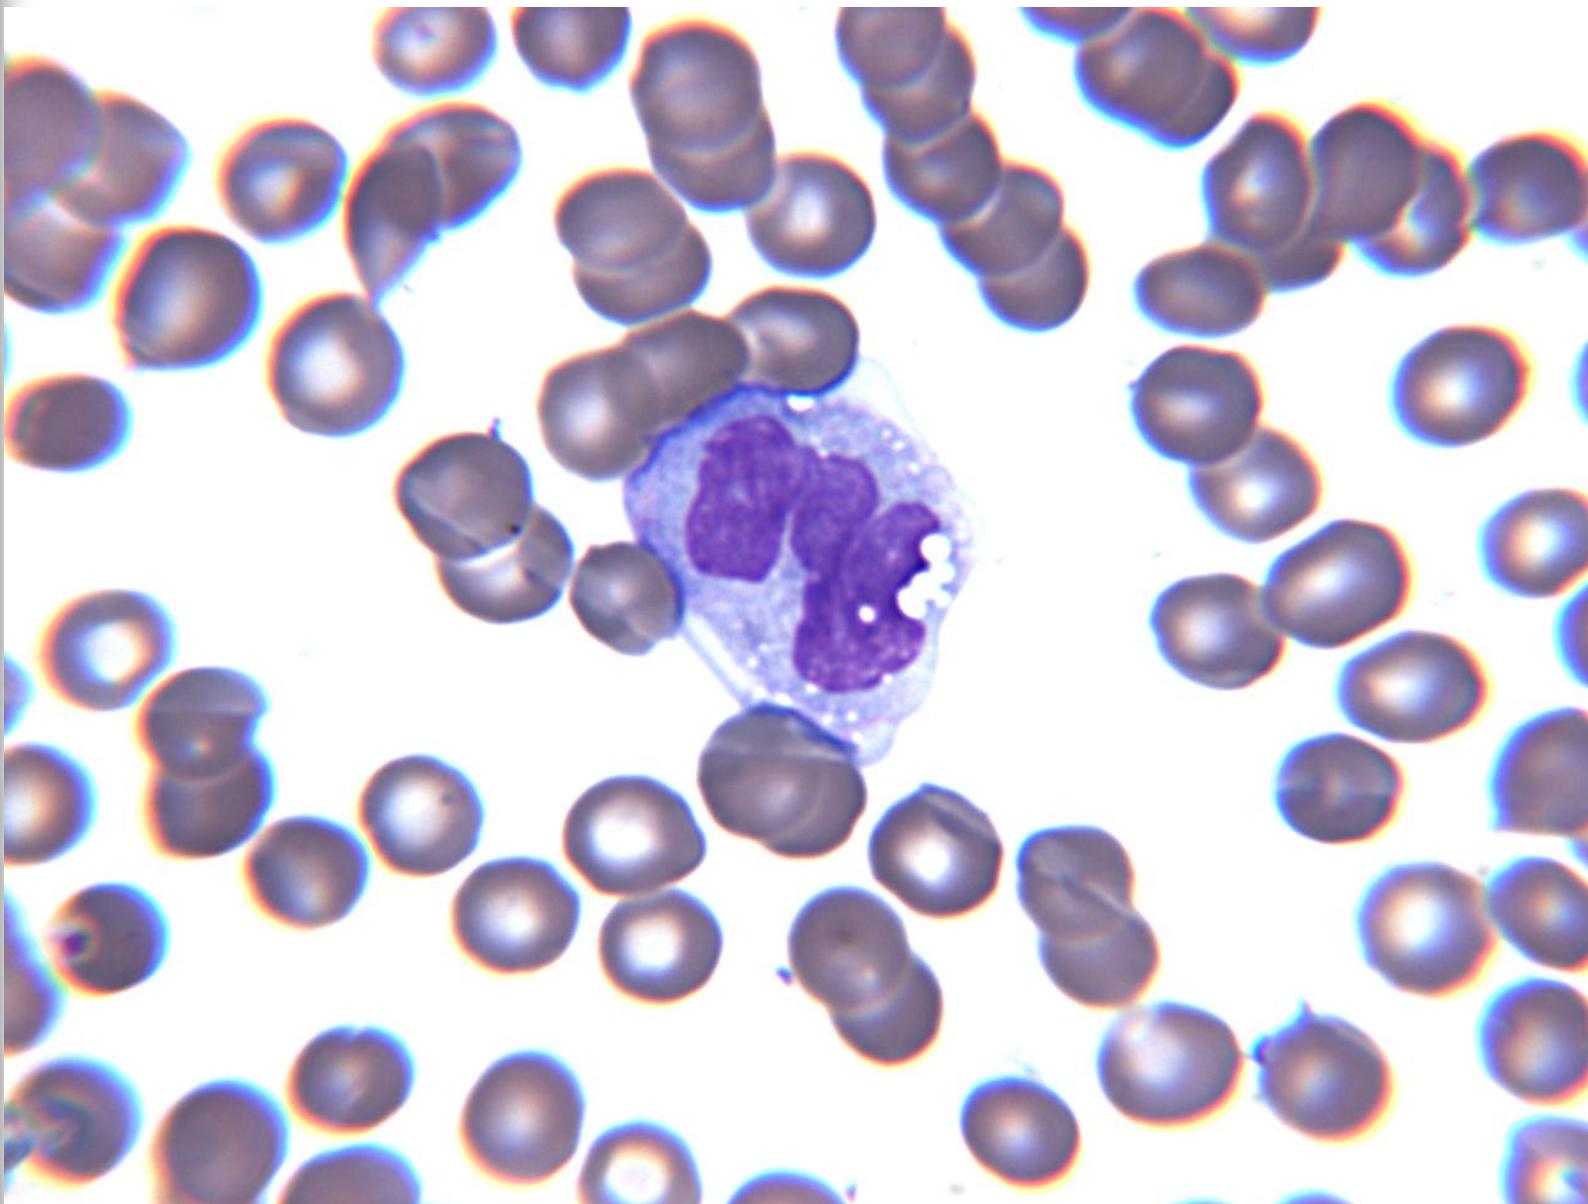

Peripheral Blood Smear

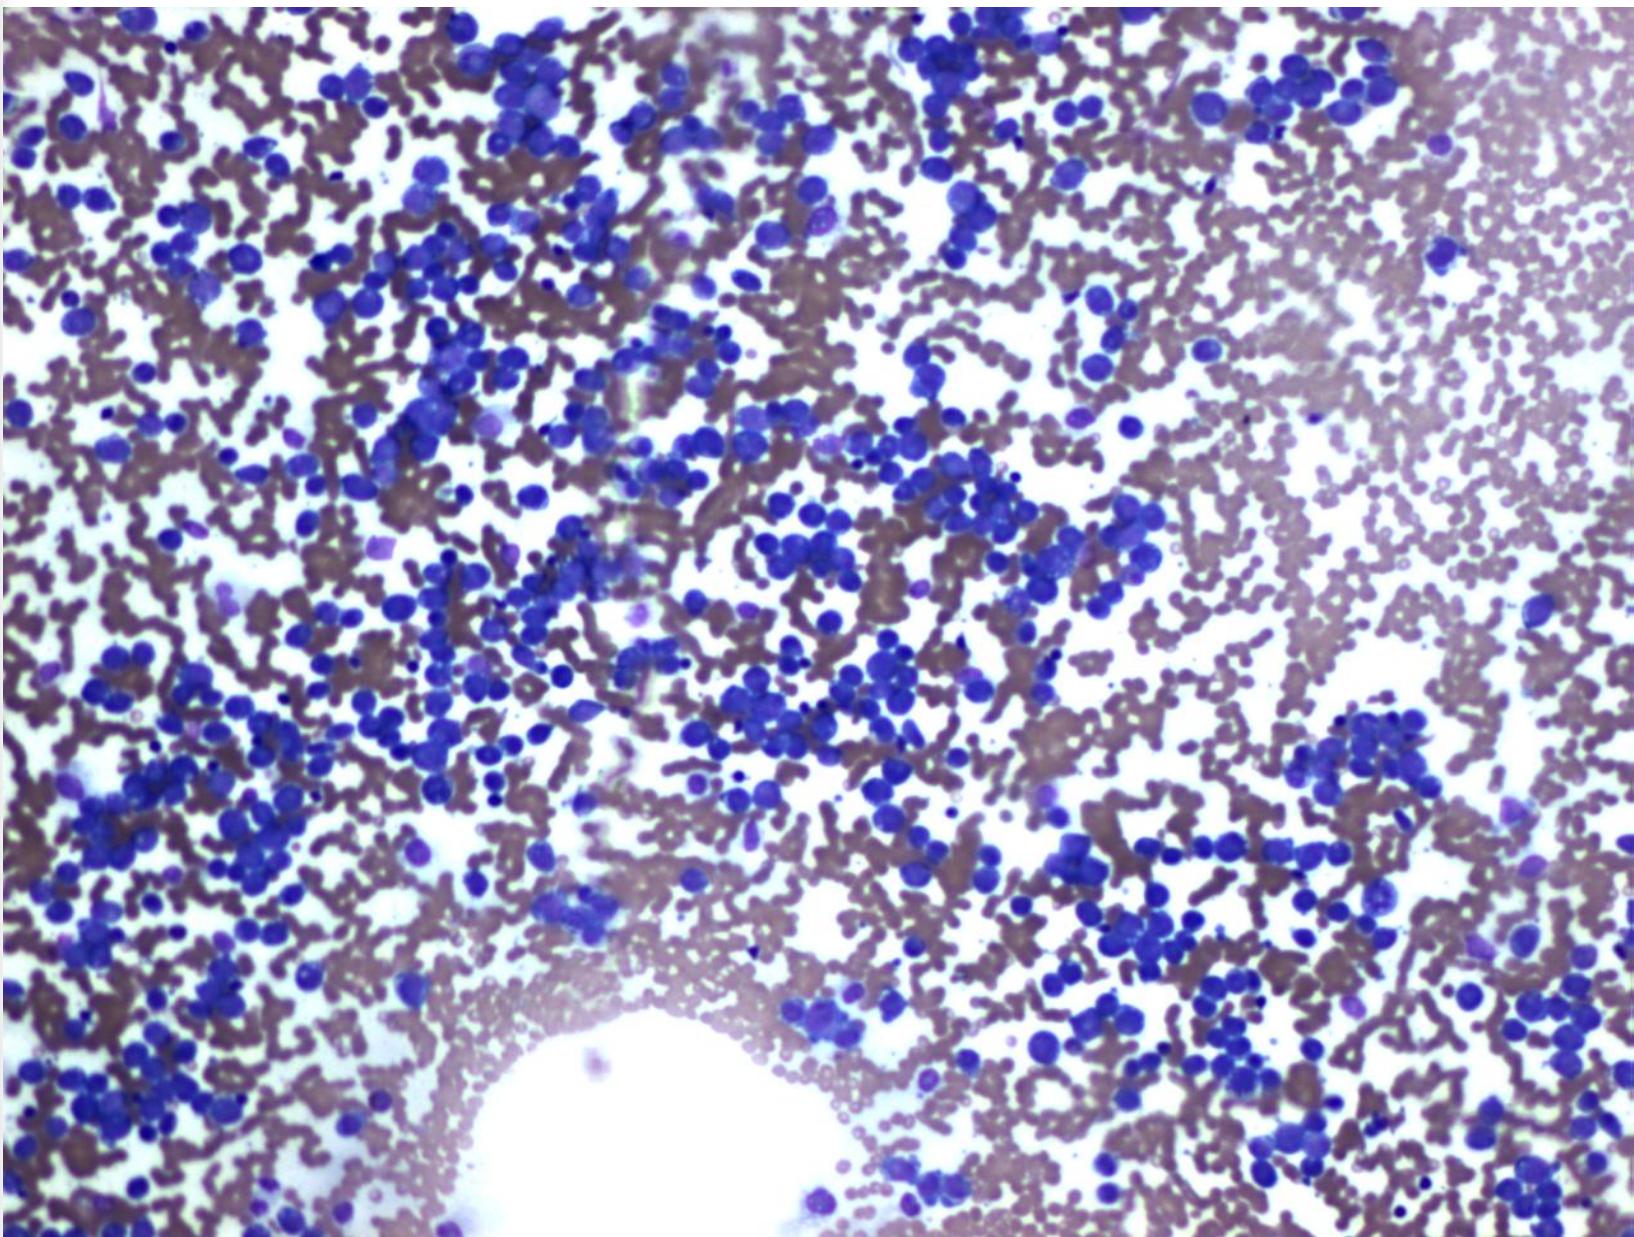

Peripheral Blood Smear (cont'd)

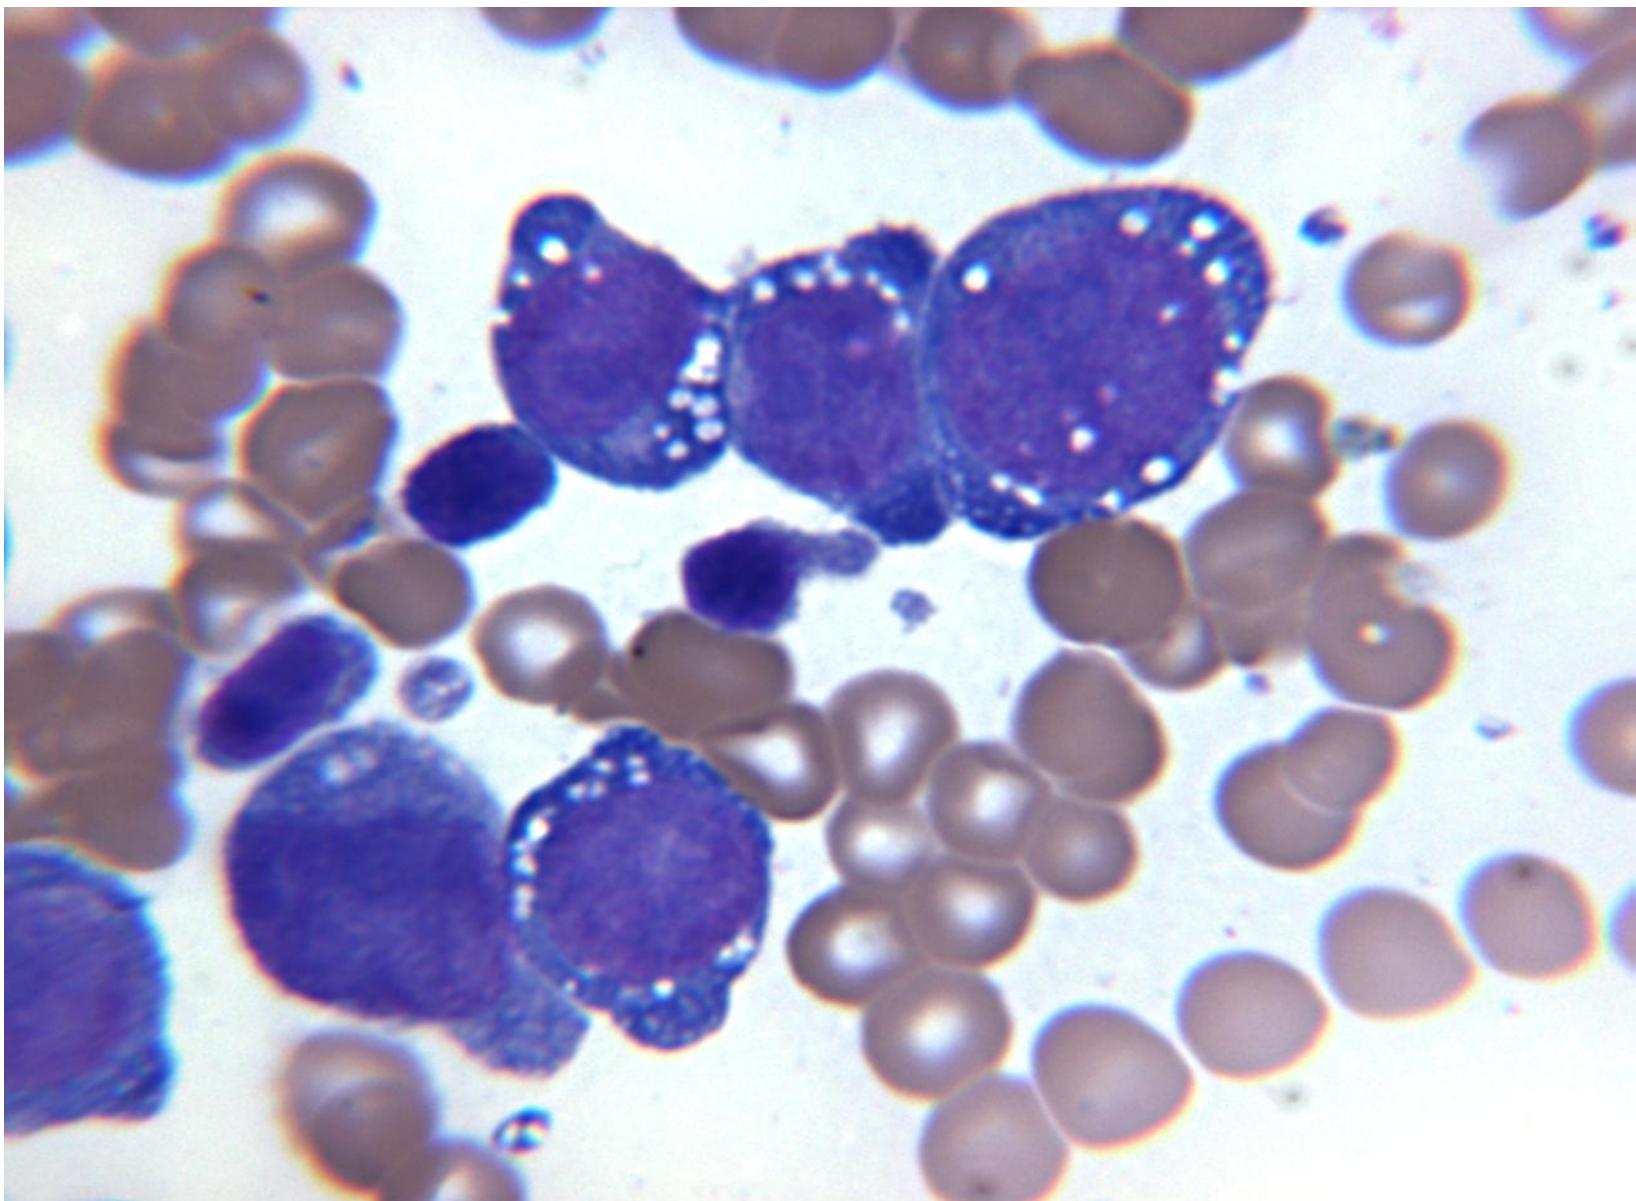

Peripheral Blood Smear (cont'd)

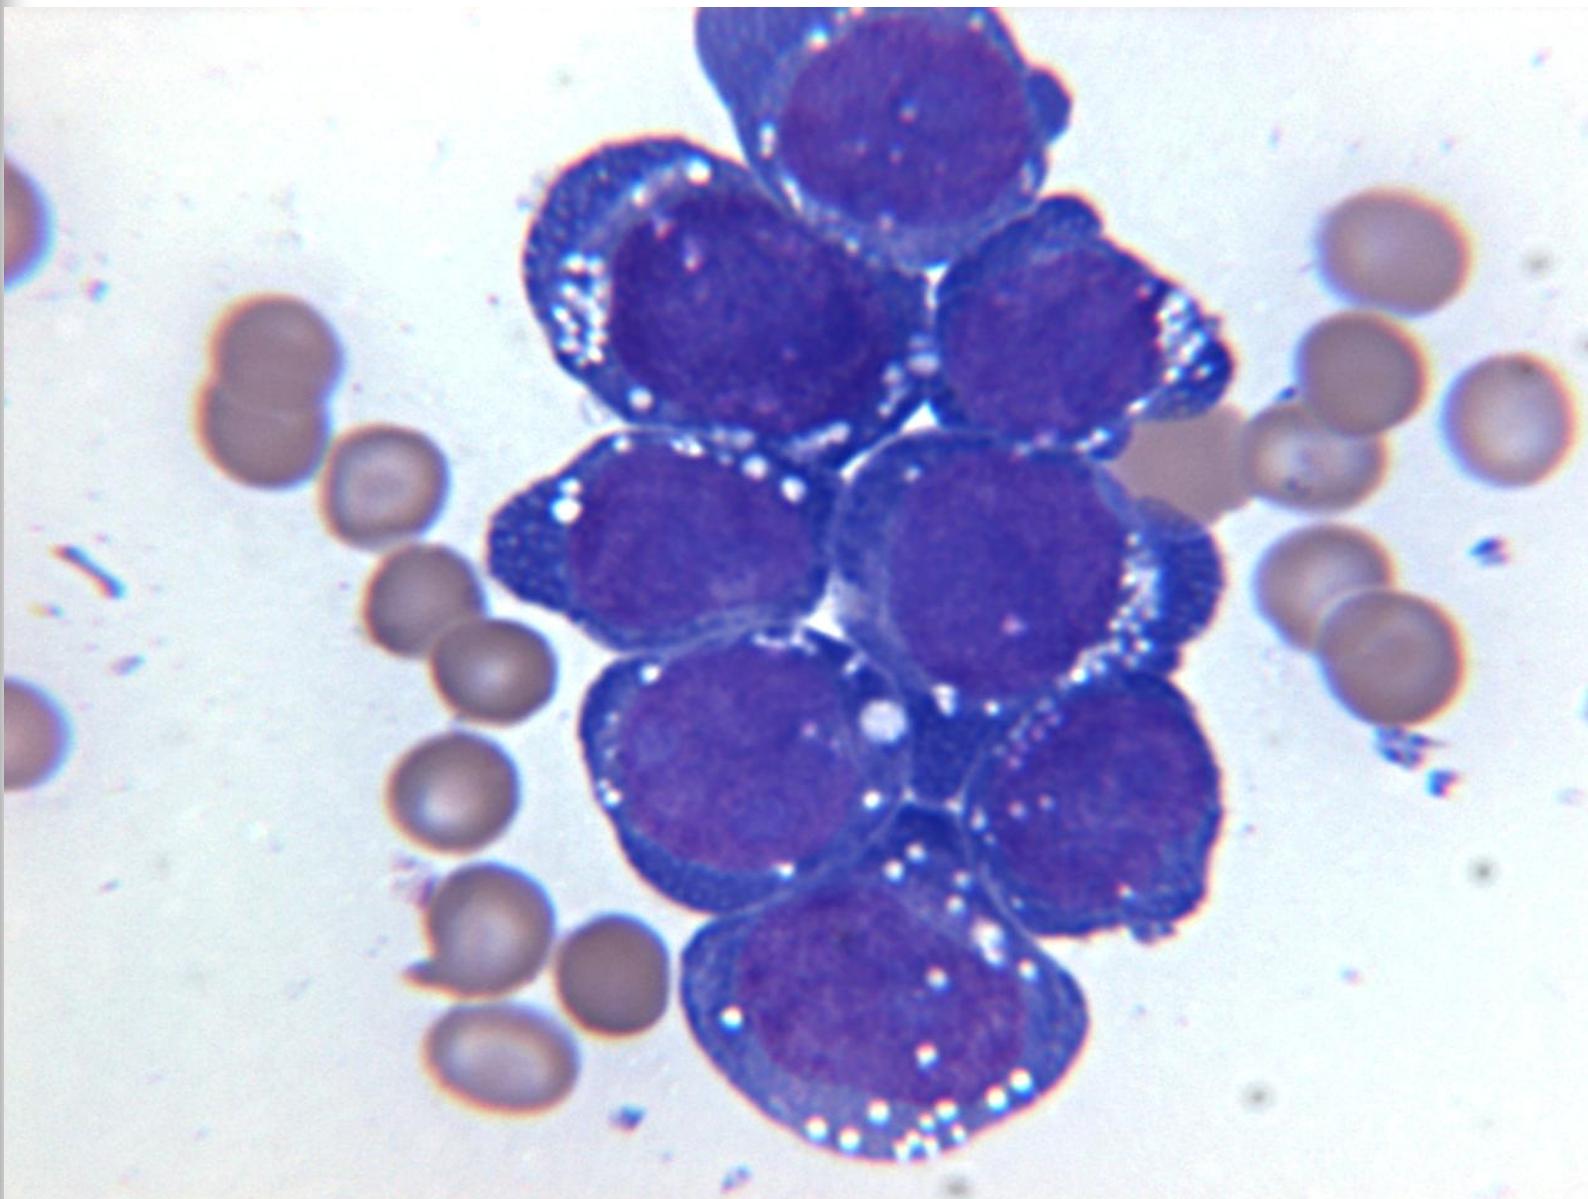

Aspirate Smear

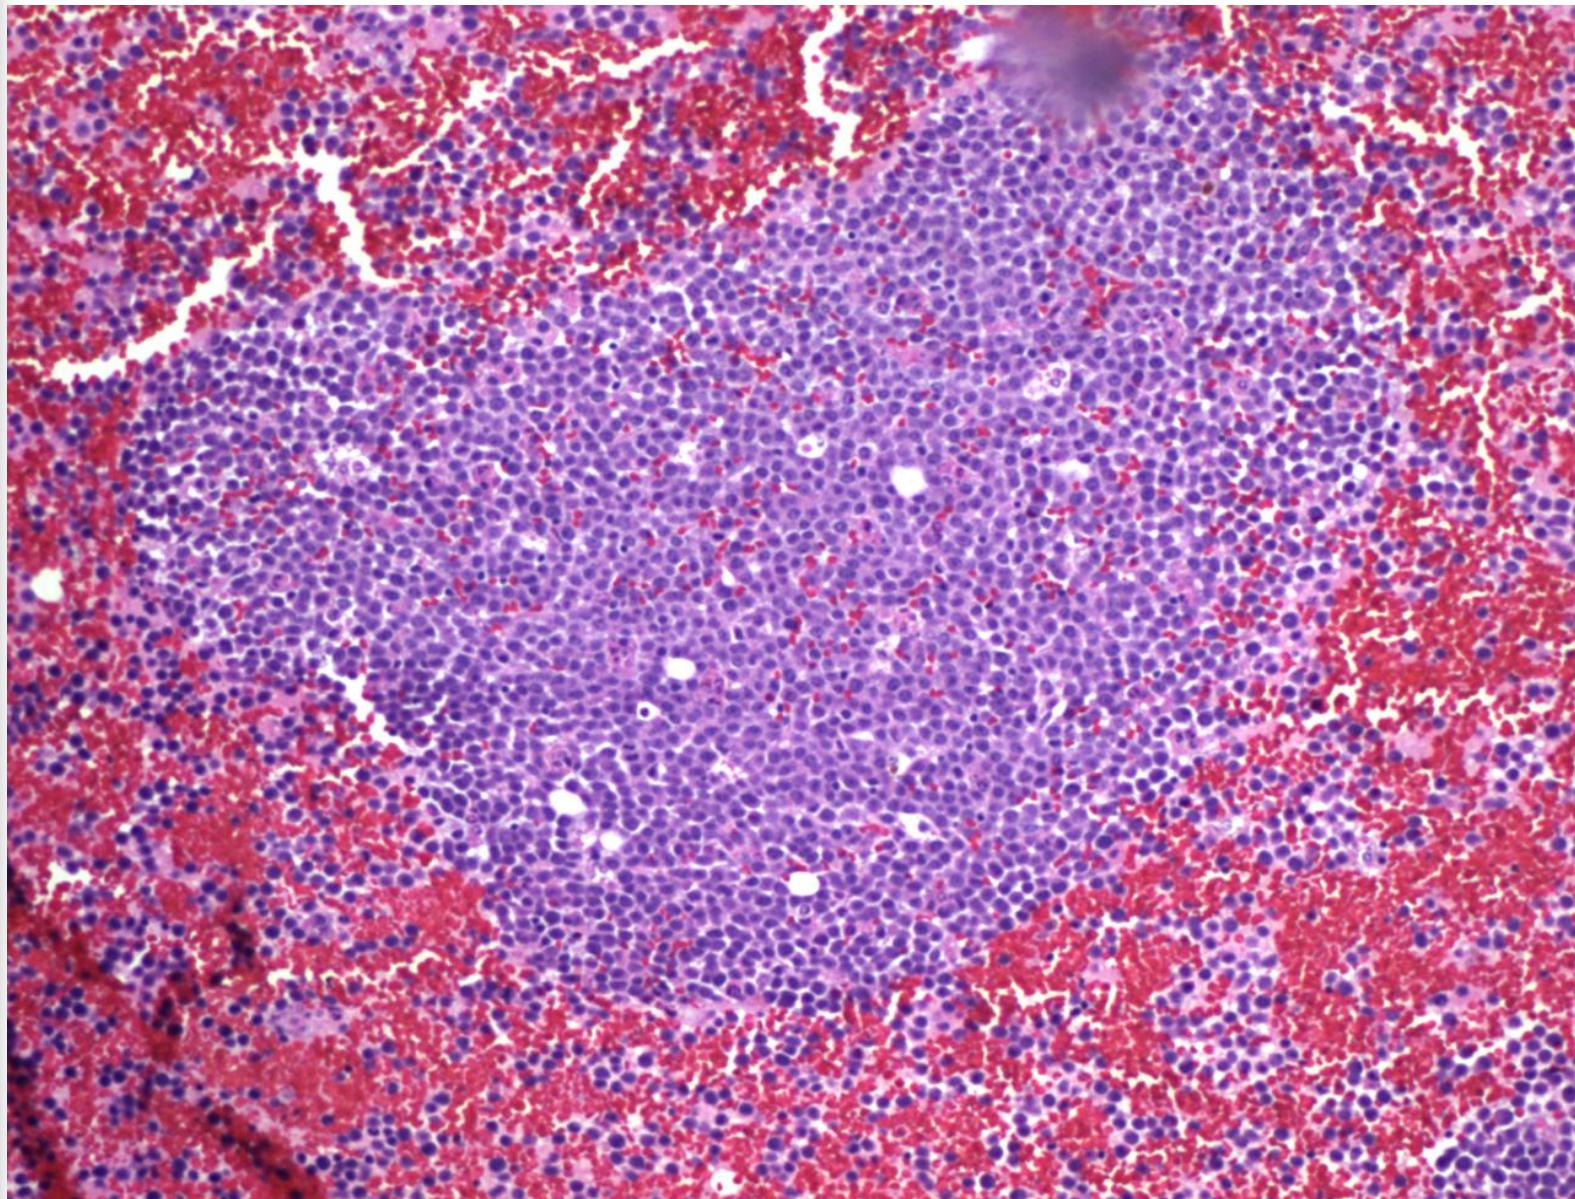

Aspirate Smear (cont'd)

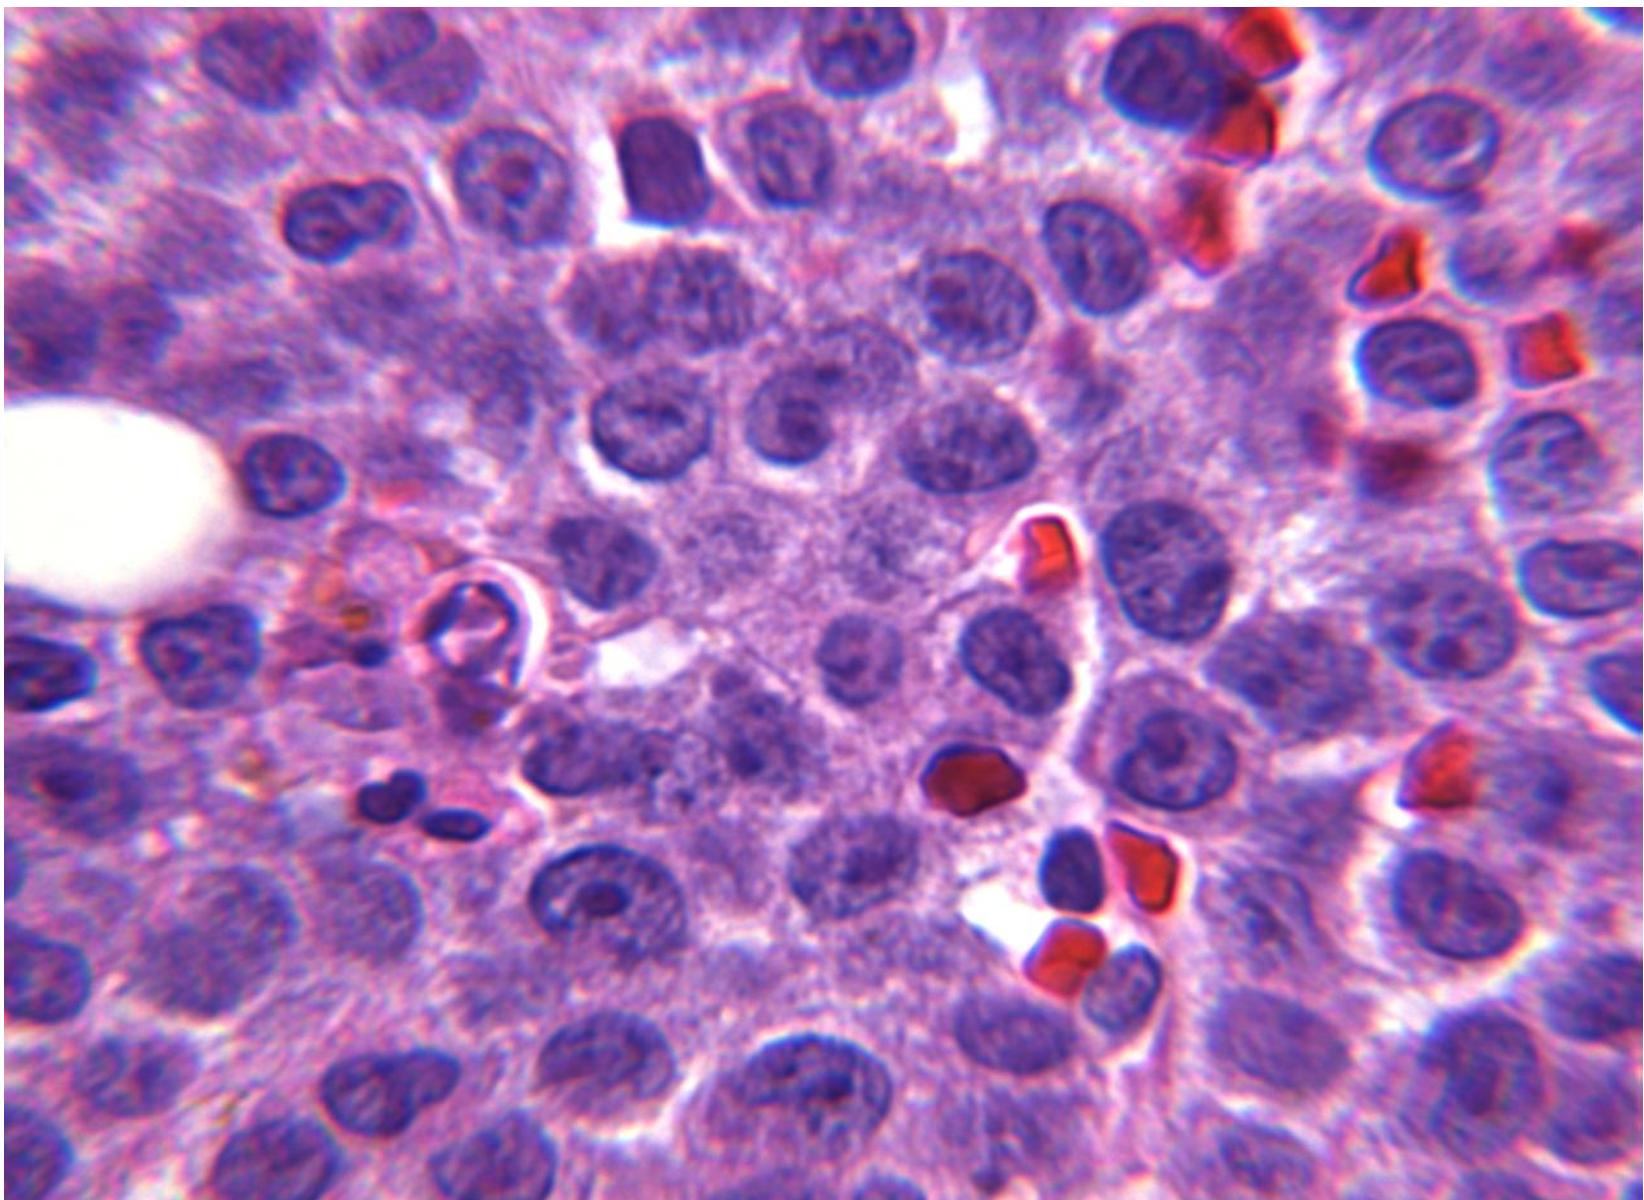

Aspirate Smear (cont'd)

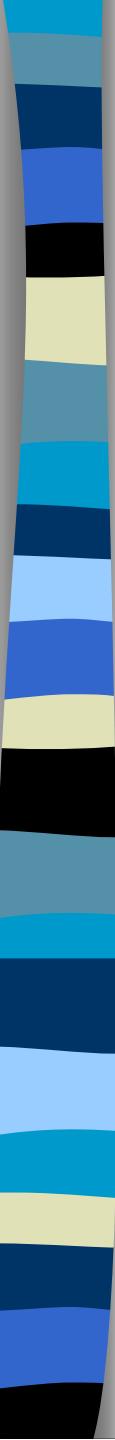

Clot Section

Clot Section (cont'd)

Diagnosis

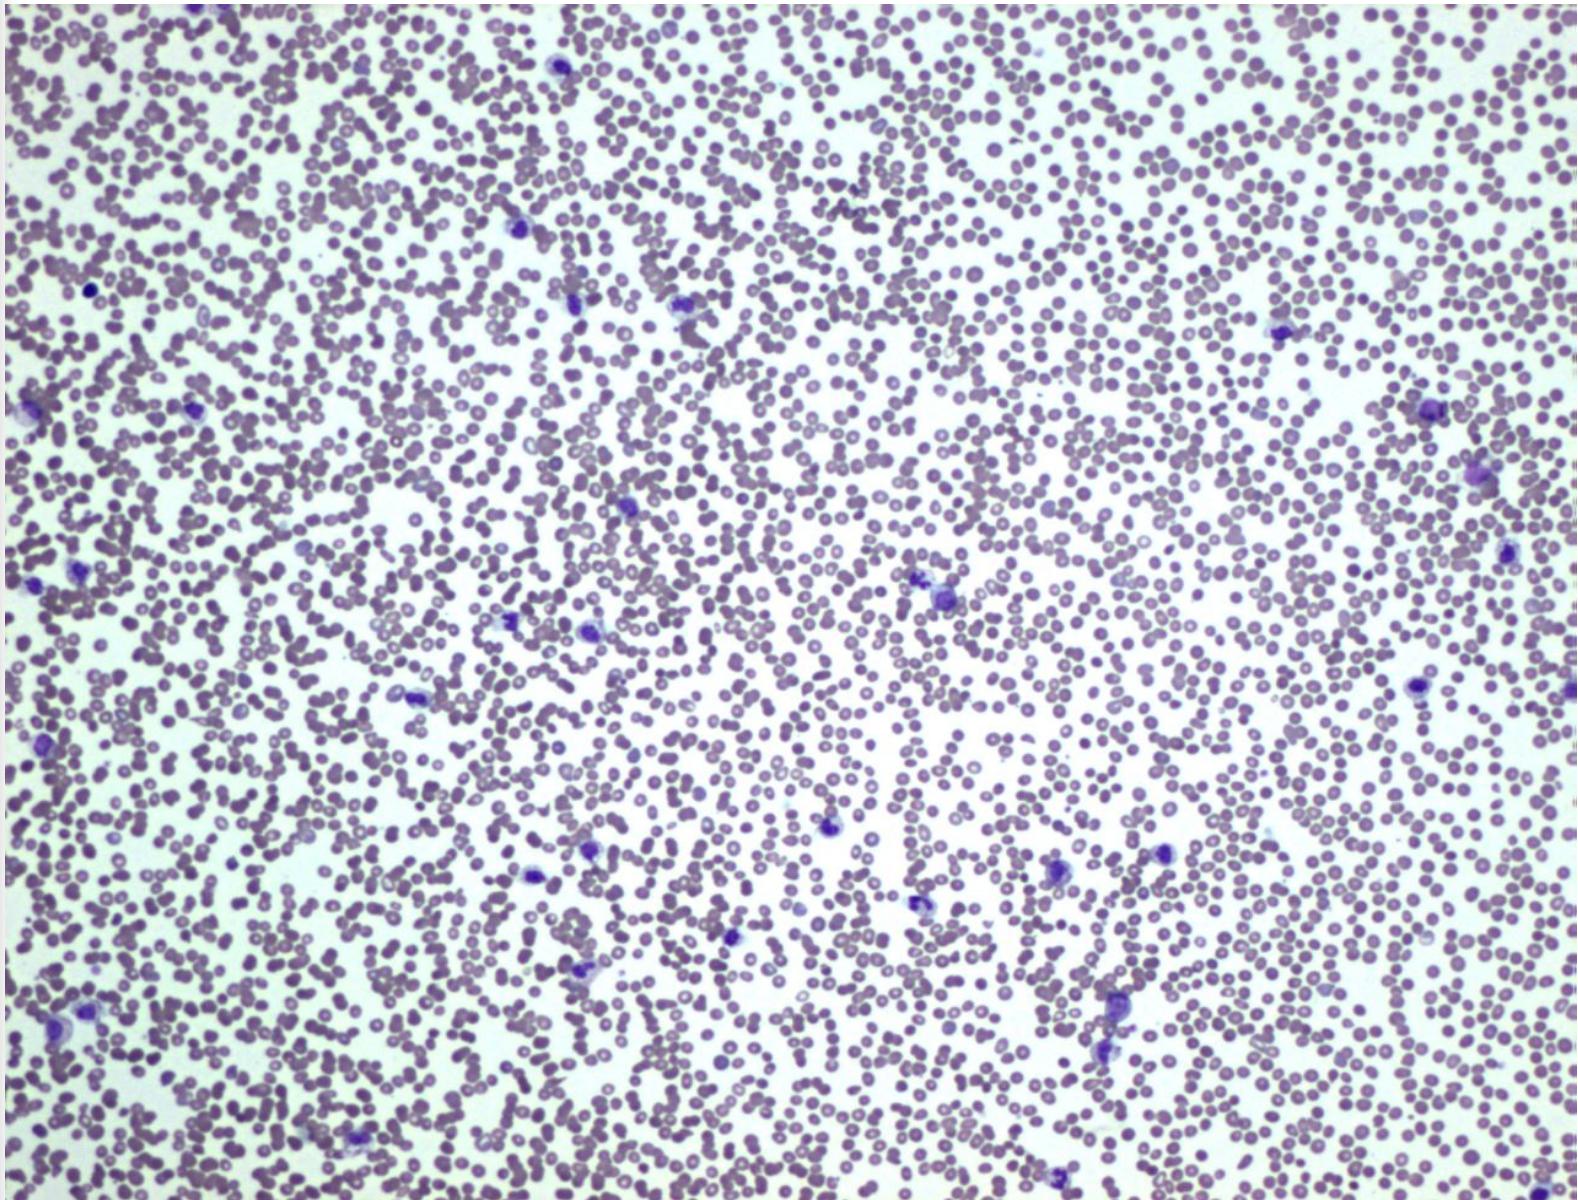

- Positive for CD13, CD33, CD11b, CD11c, CD14
- More than 80% monoblasts-> consistent with acute monoblastic leukemia (AML-M5a)
- Cytogenetics: N/A (strong association with del or trans of 11q)

HB-03-26

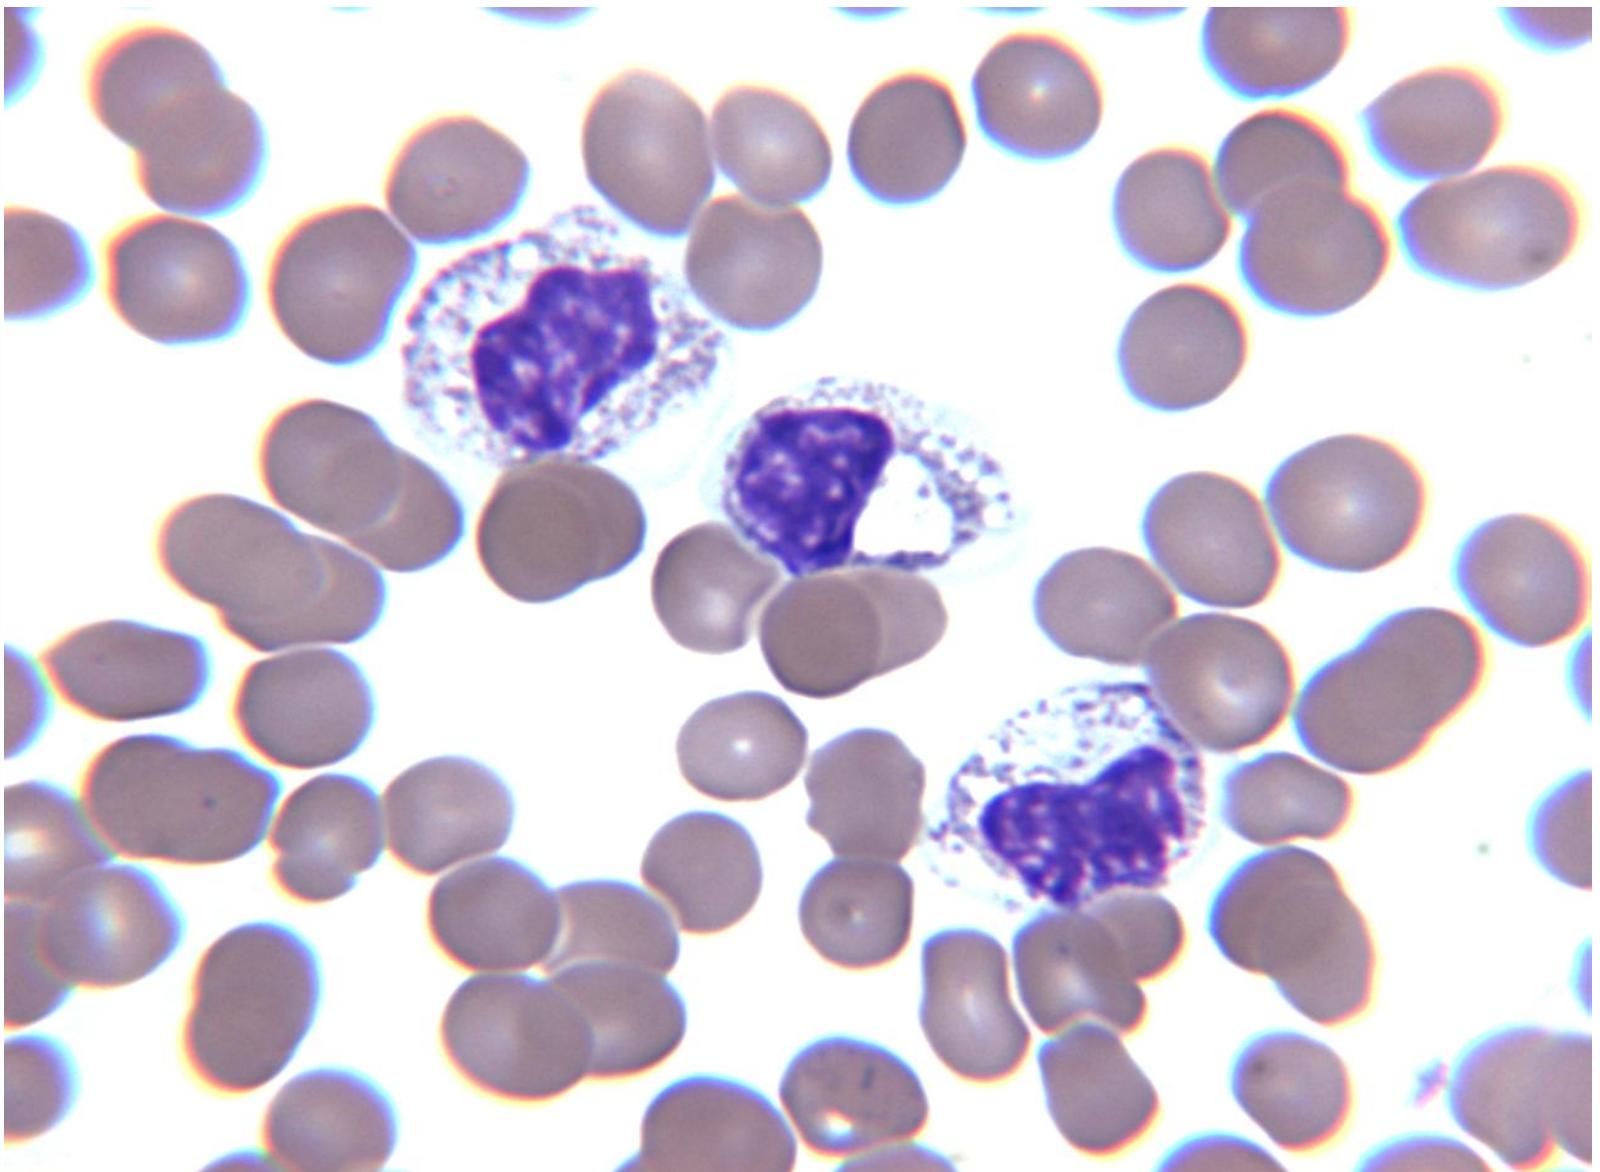

Patient Name: MCLXXXX, JOHXXXX

- 85 year-old male with anemia, thrombocytopenia and granulocytosis.
- The patient also has a lung mass (pneumonia vs. tumor ?)
- WBC= 17.3, Hgb= 10.1, Plt= decreased, MCV=101.4
Seg 18, Band 40, Lymph 14, Eos 4, Baso 0, Meta 12, Myelo 10, Blast 2, NRBC 2
- Bone marrow aspirate: Blast 1, Promyelo 2, Myelo 54, Meta 7, PMN&band 4, Eos 1, Mono 1, Lymph 7, PC 1, RBC 23 (M/E 2.9)
- Bone marrow biopsy 90% cellularity

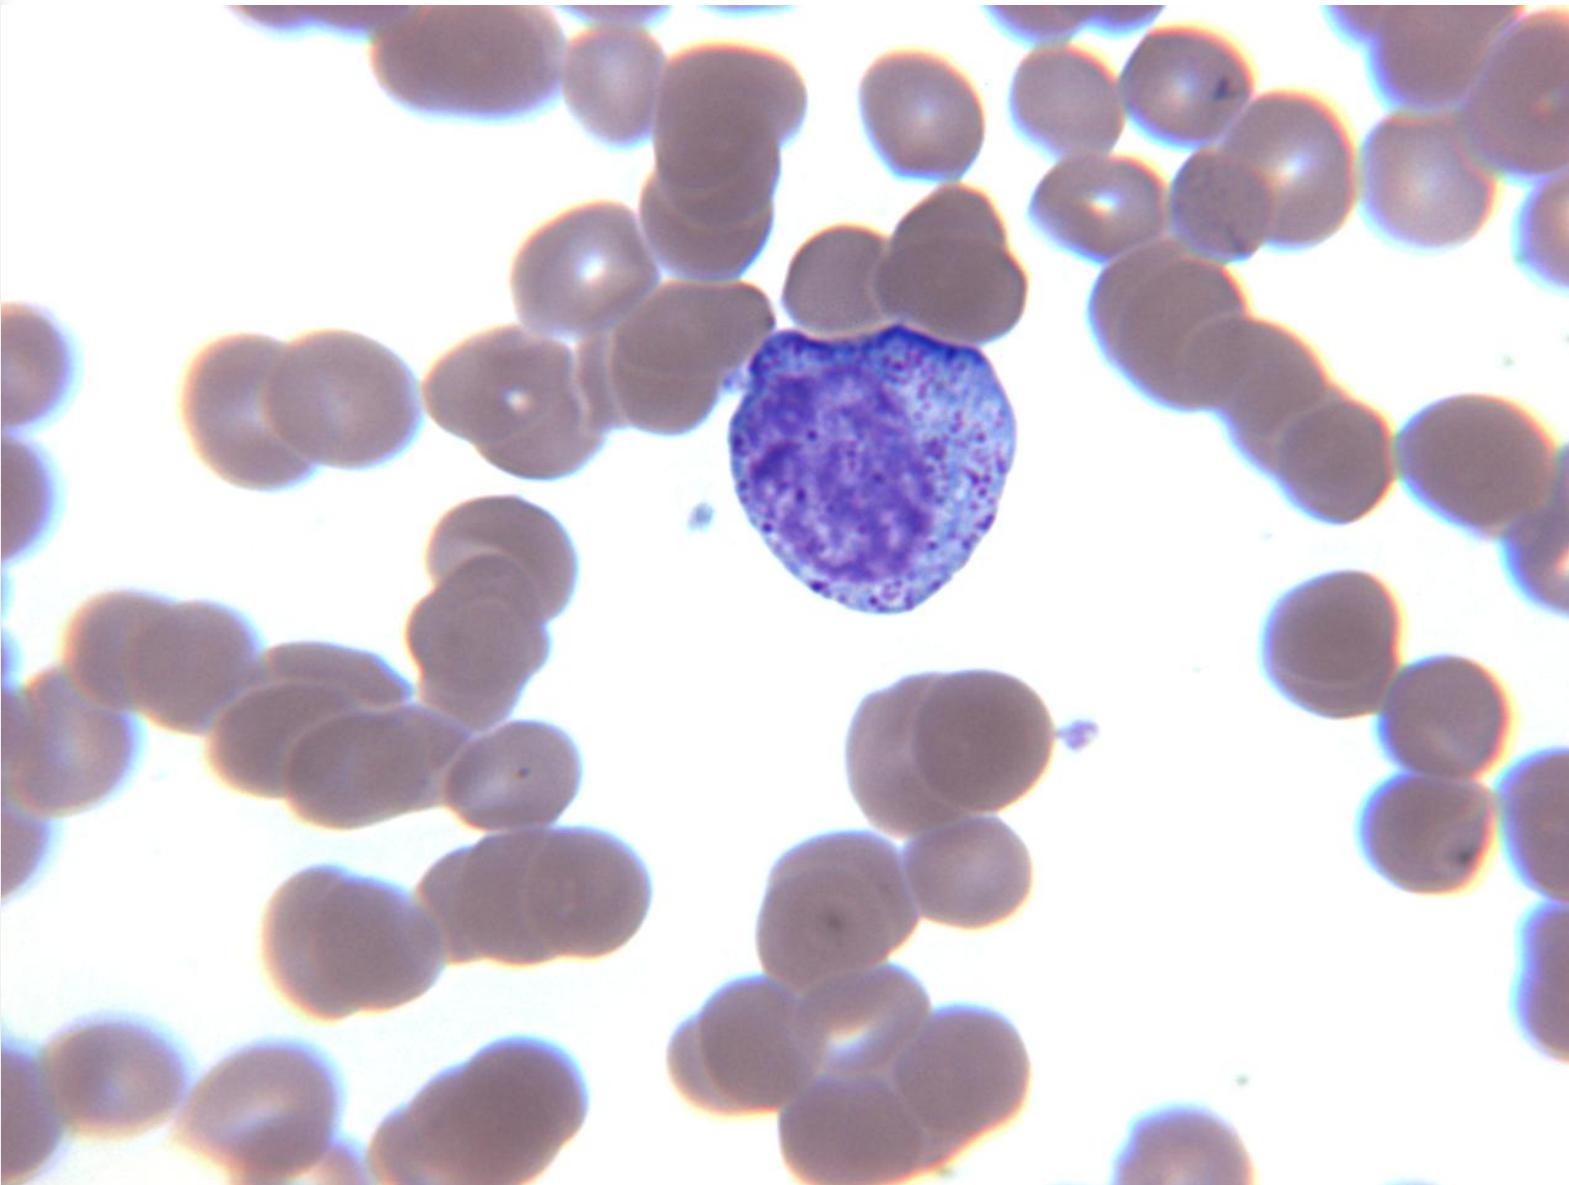

Peripheral Blood Smear

Thu Mar 20 16:01:09 2003

Biopsy

Biopsy (cont'd)

Diagnosis

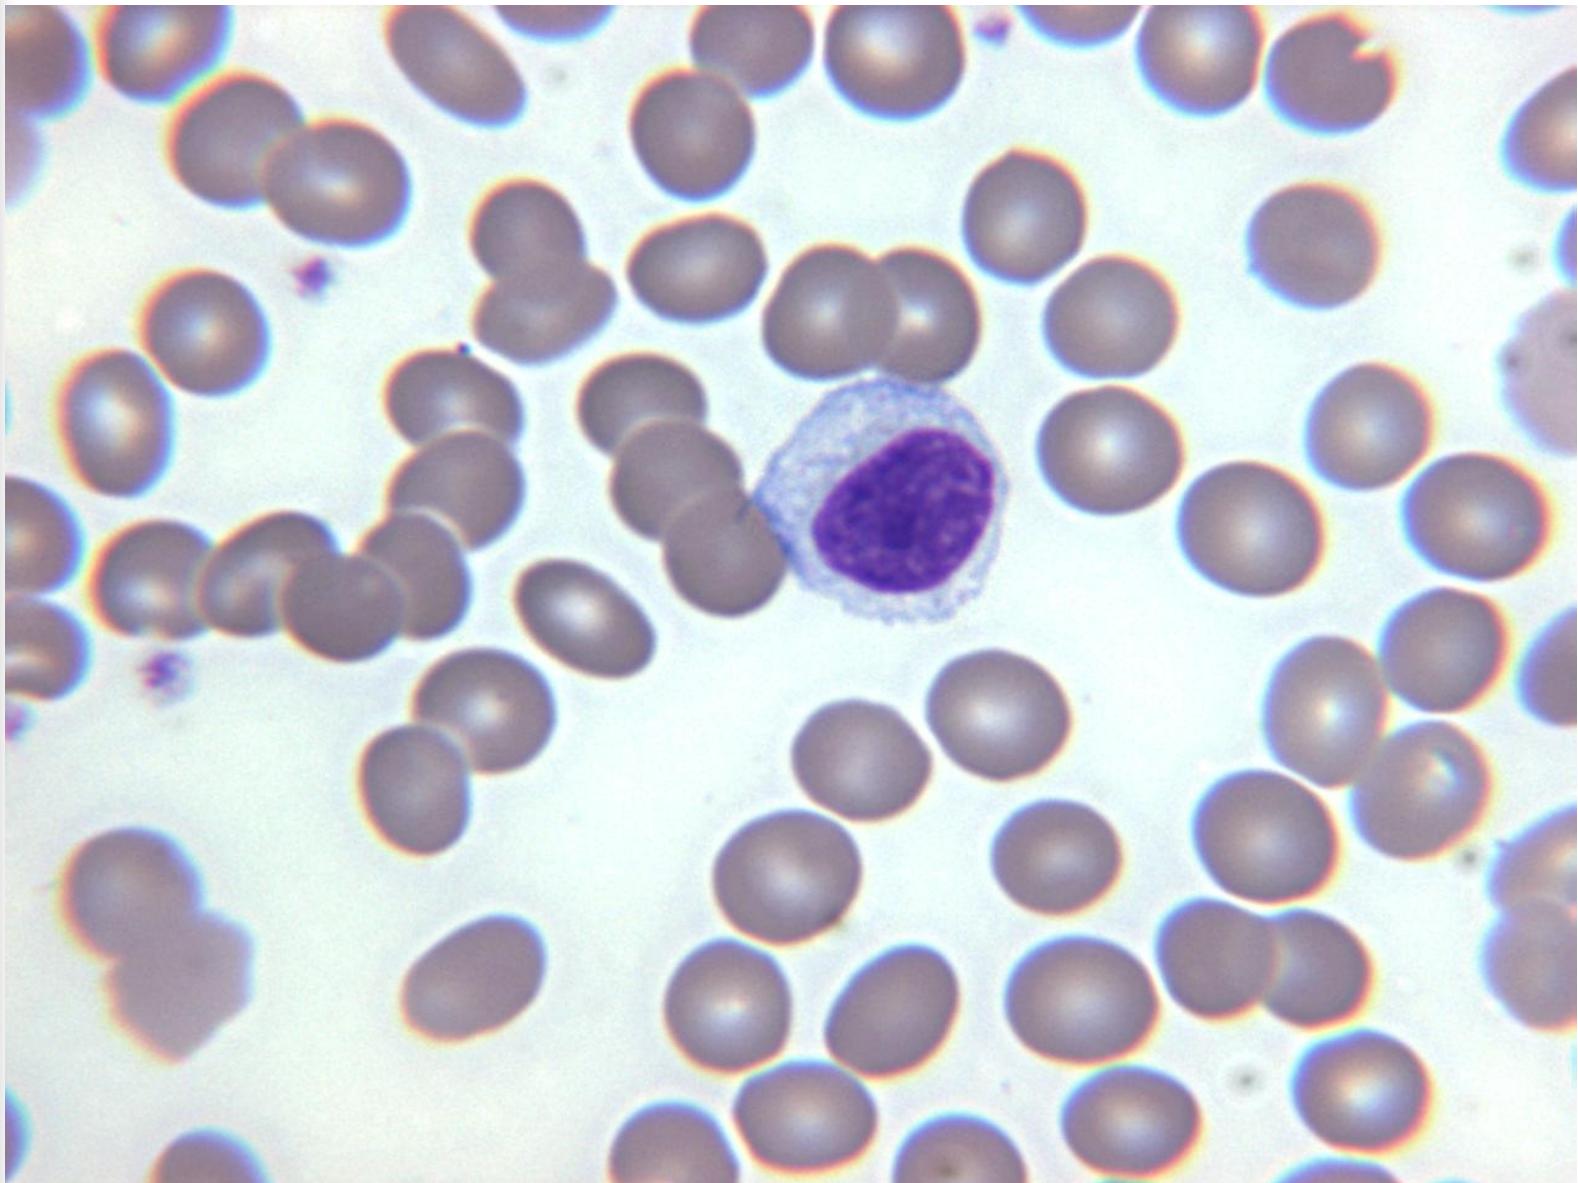

- Differential Dx: myeloproliferative disorder (CML, CMML, atypical CML), severe leukemoid reaction
- Cytogenetics: positive for del 20q-> atyp CML
- Atyp CML:
 - (1) Leukocytosis with left shift, abnormal condensed chromatin, no basophilia, no monocytosis
 - (2) Hypercellular bone marrow with dysplasia
 - (3) No Ph chromosome
 - (4) 80% with chromosome abnormalities (del 20q, +8, +13, inv 17q, del 12p)
 - (5) Median survival 20 months, poor prognosis with anemia and thrombocytopenia

HB-03-30

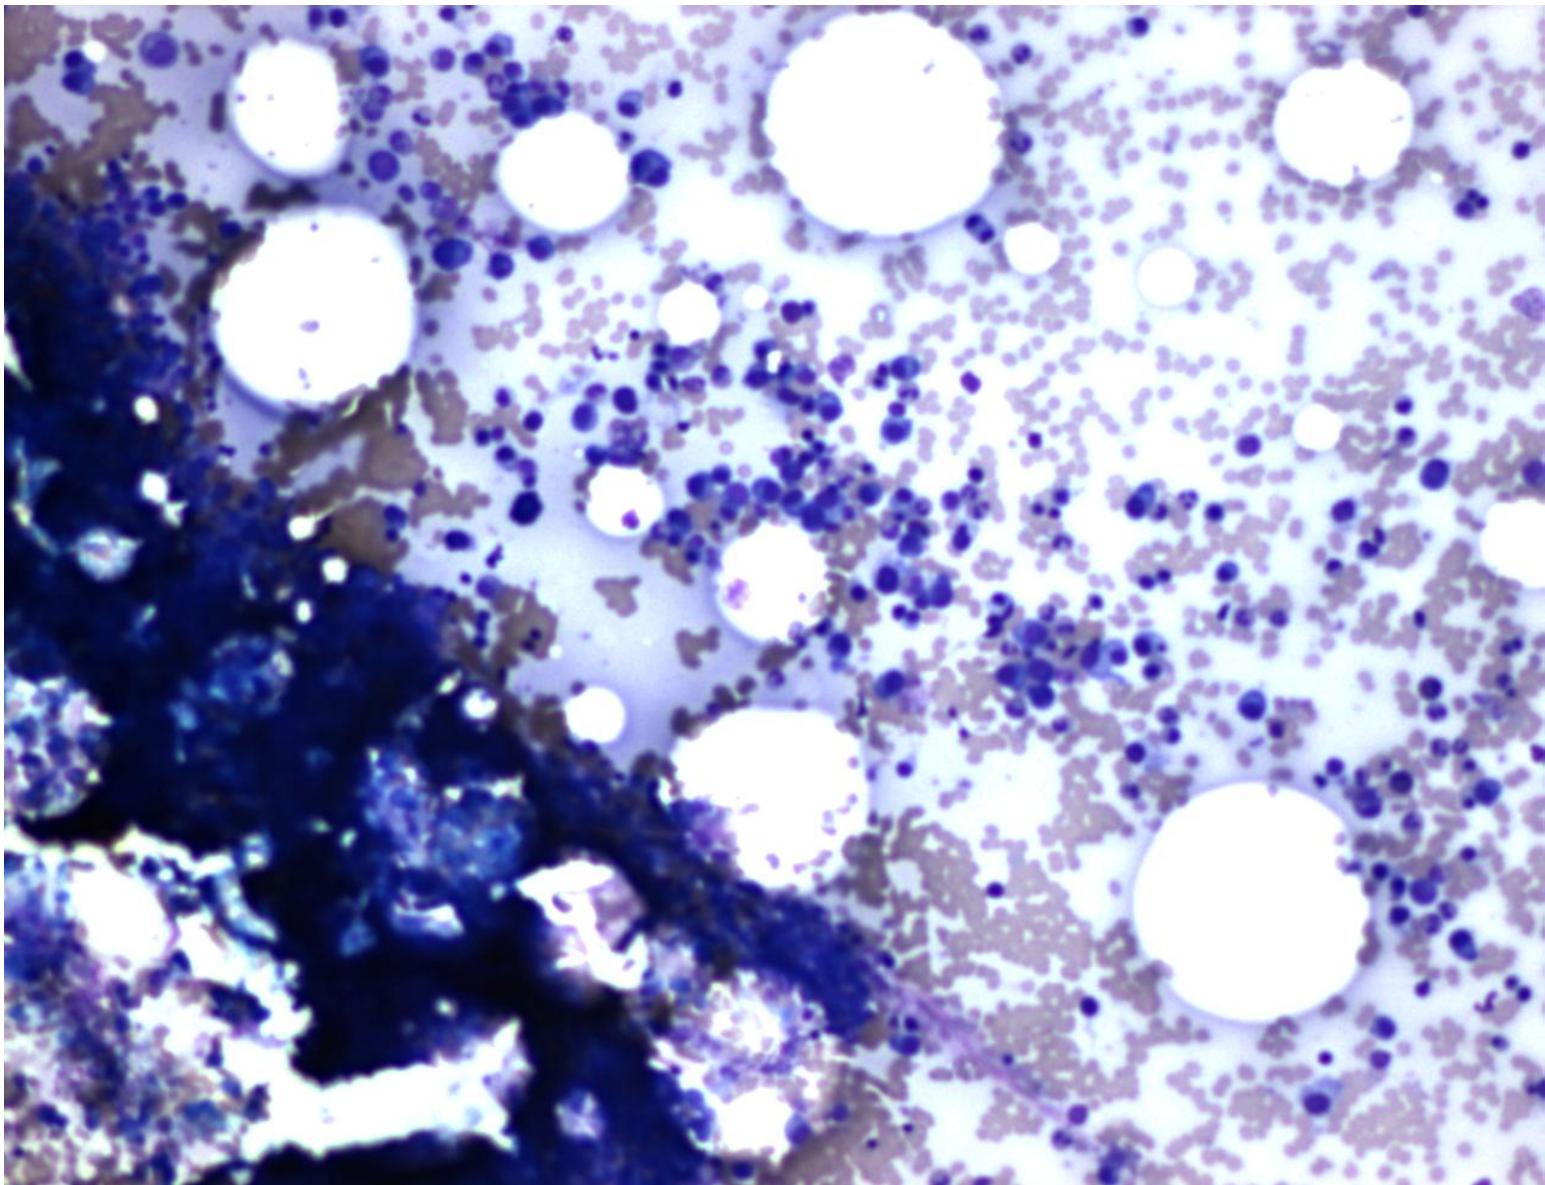

Patient Name: SMOXXXX, LINXXXX

- 72 year old male with monoclonal gammopathy (IgG-kappa, serum IgG=3.5 g/dL), reduced immunoglobulins IgM and IgA; X-ray shows lytic bone lesions.
- WBC=3.7, Hgb=12.7, Plt=163,000, MCV=82.8
Seg 47, Lymph 39, Mono 13, Baso 1
- Bone marrow aspirate: PC 34, Promyelo 1.5, Myelo 8, Meta 9.5, PMN&band 20, Eos 1.5, Mono 1.5, Lymph 11, RBC 13
- Bone marrow biopsy: 15% cellularity

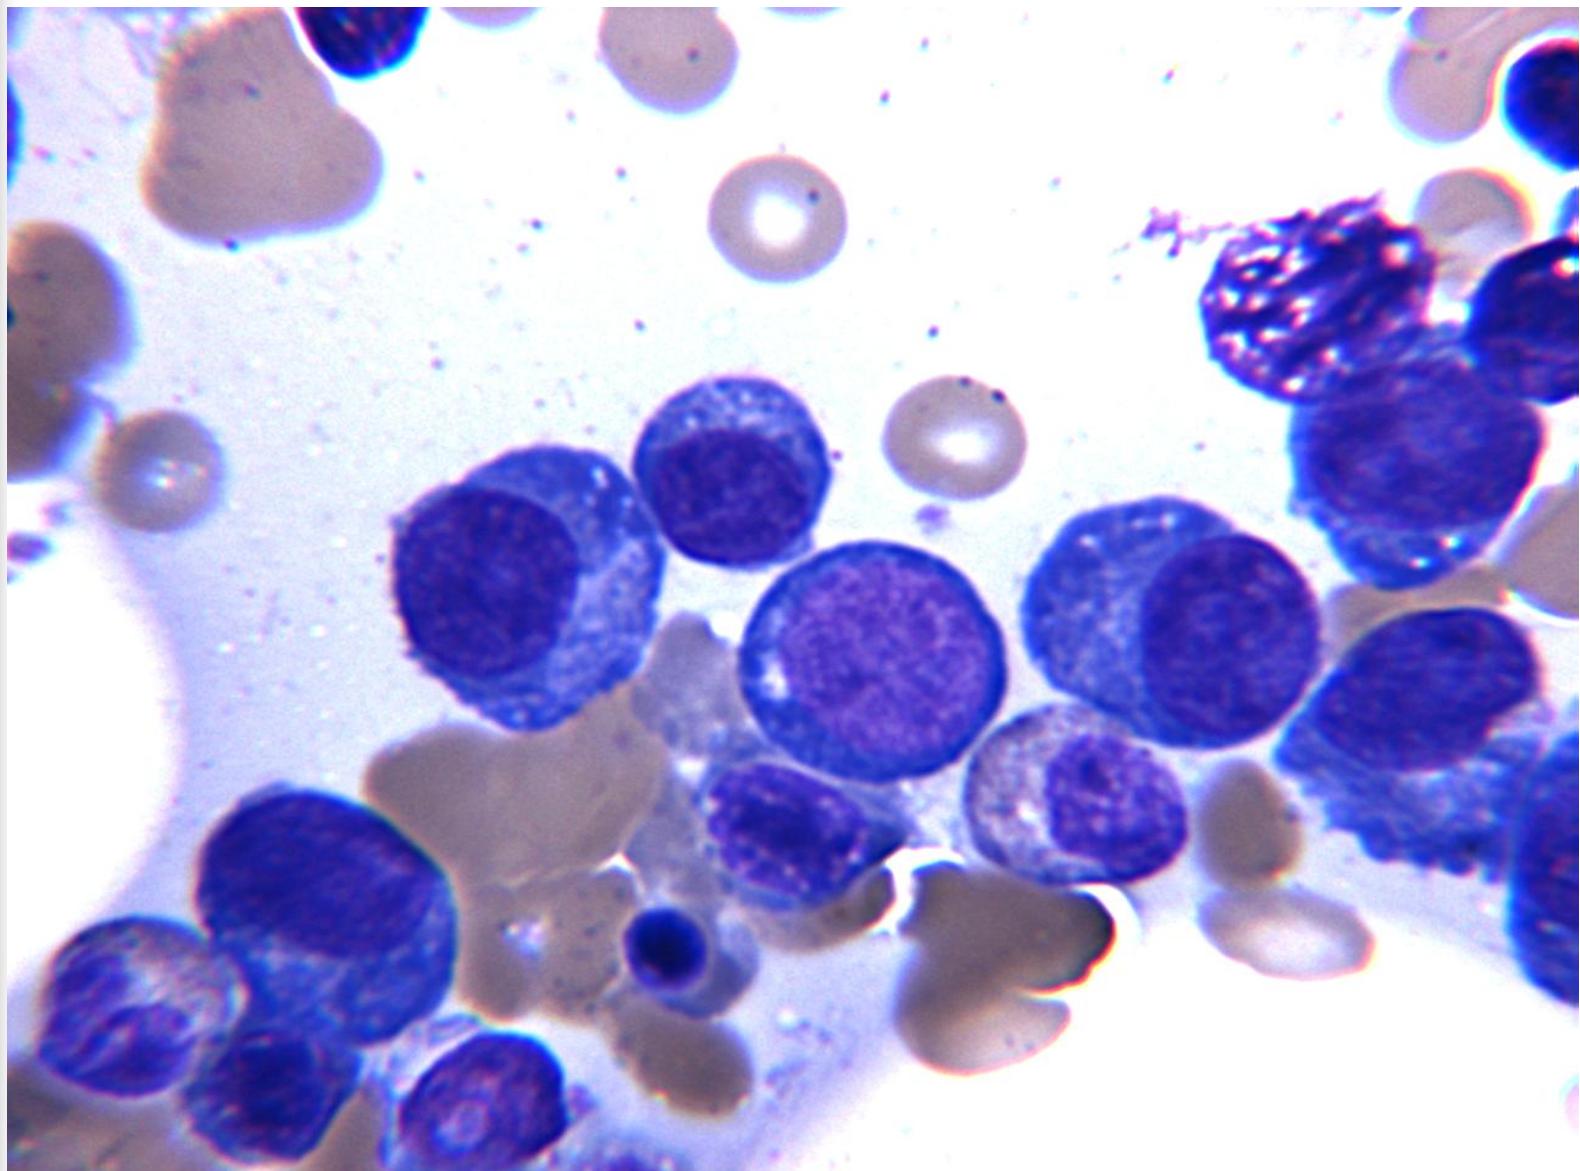

Peripheral Blood Smear

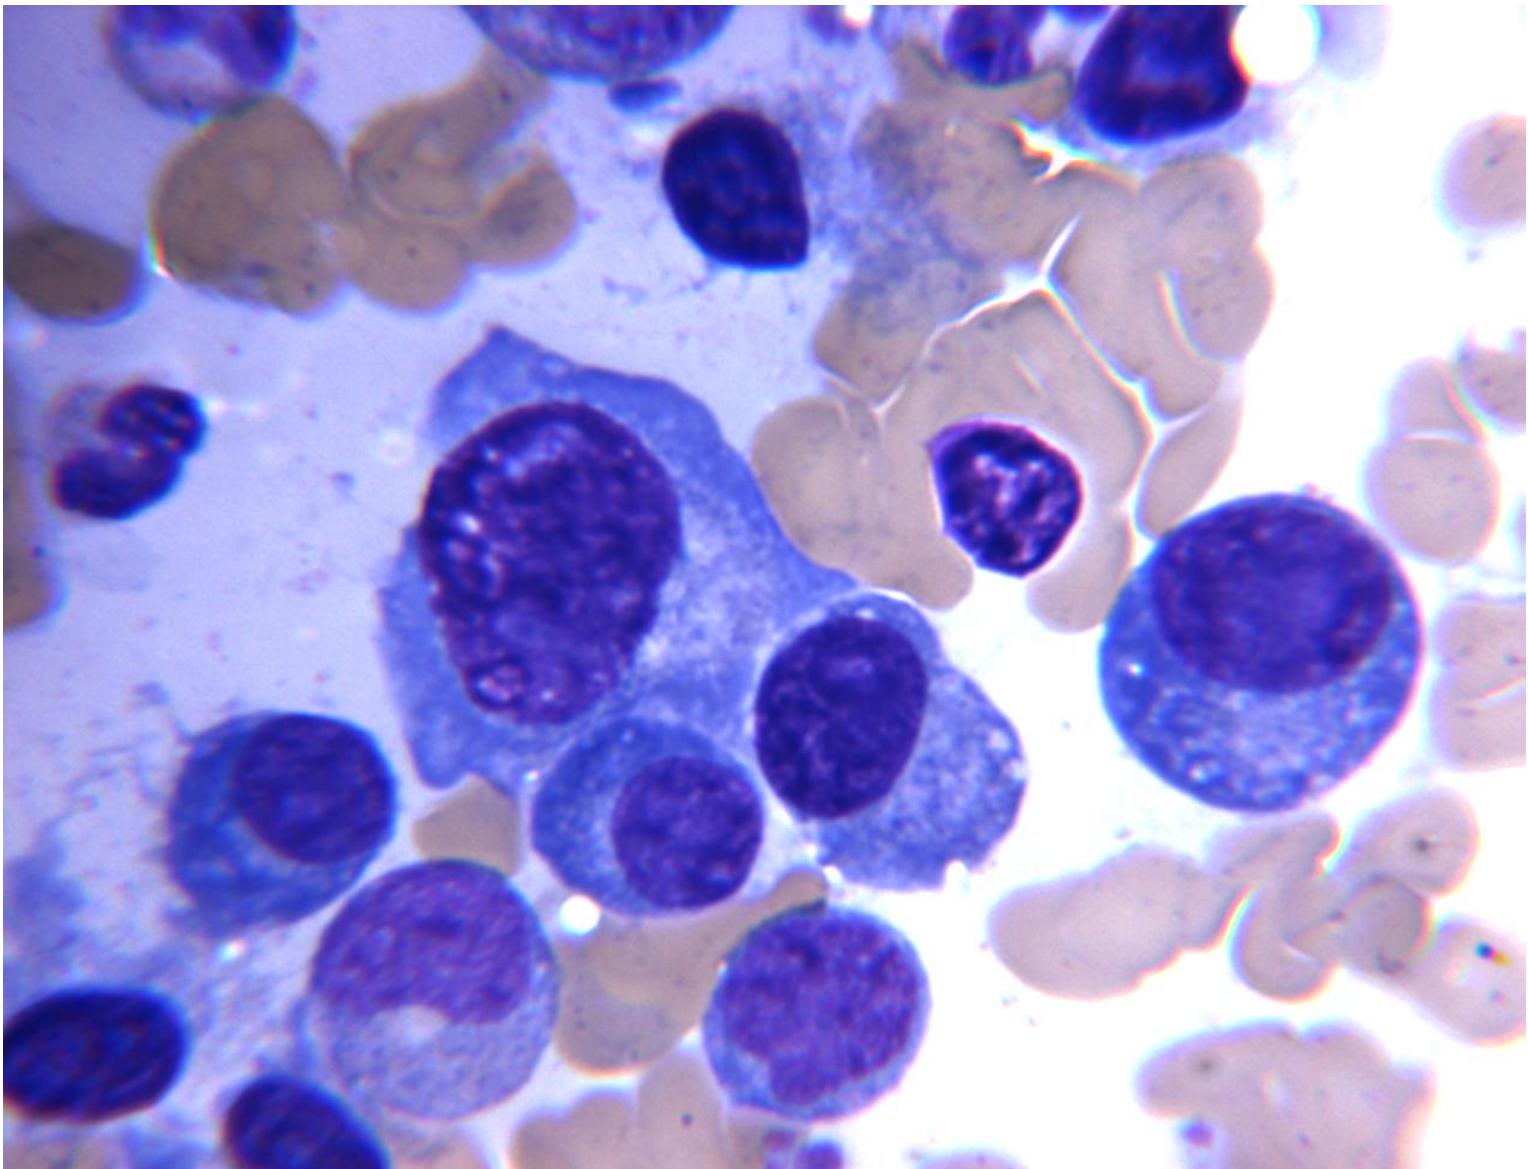

Aspirate Smear

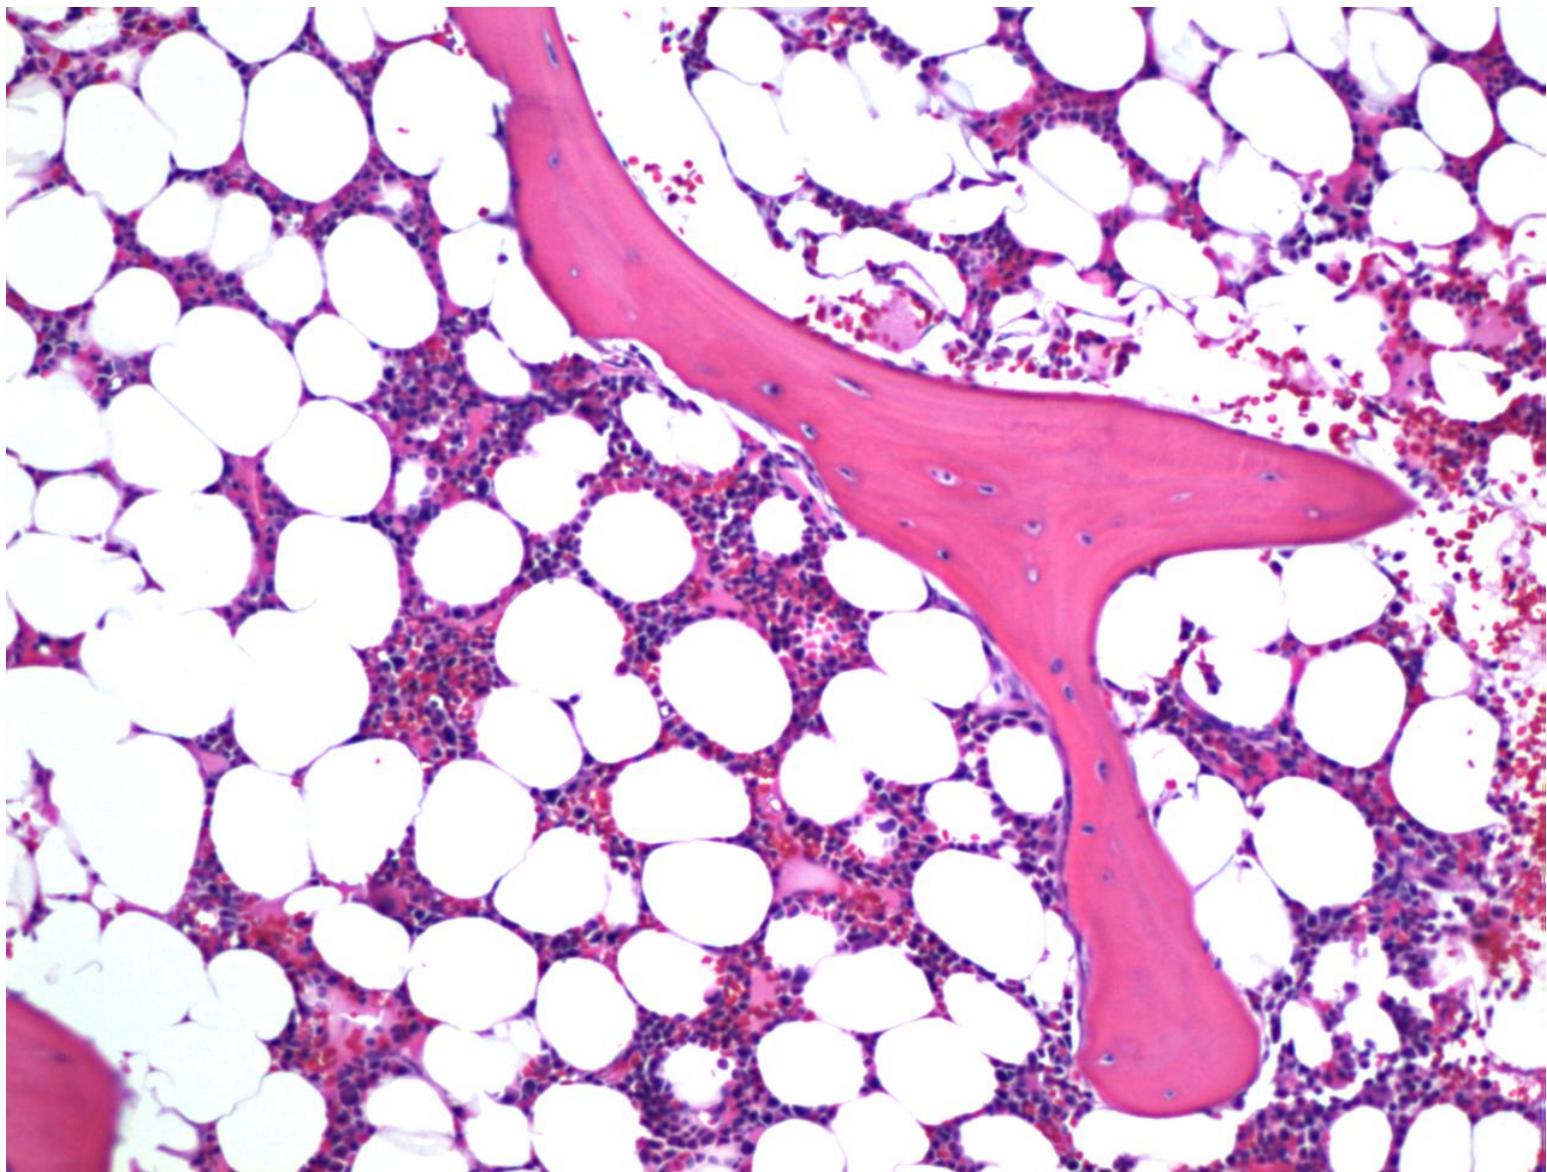

Aspirate Smear (cont'd)

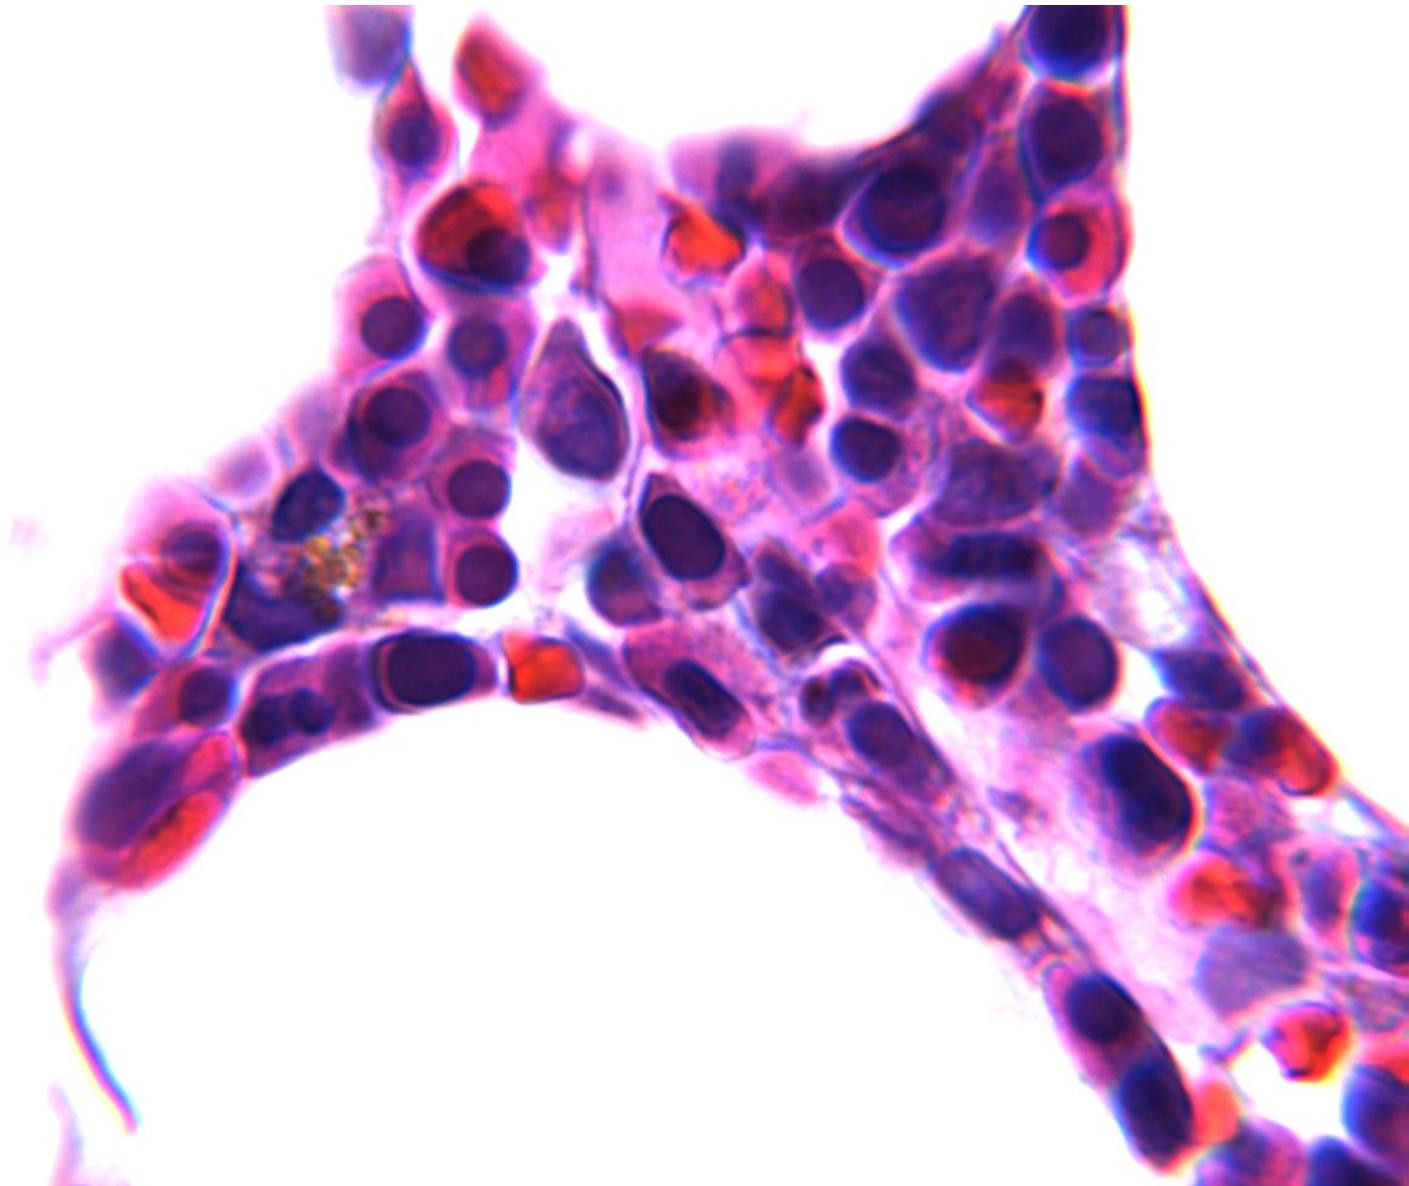

Aspirate Smear (cont'd)

Biopsy

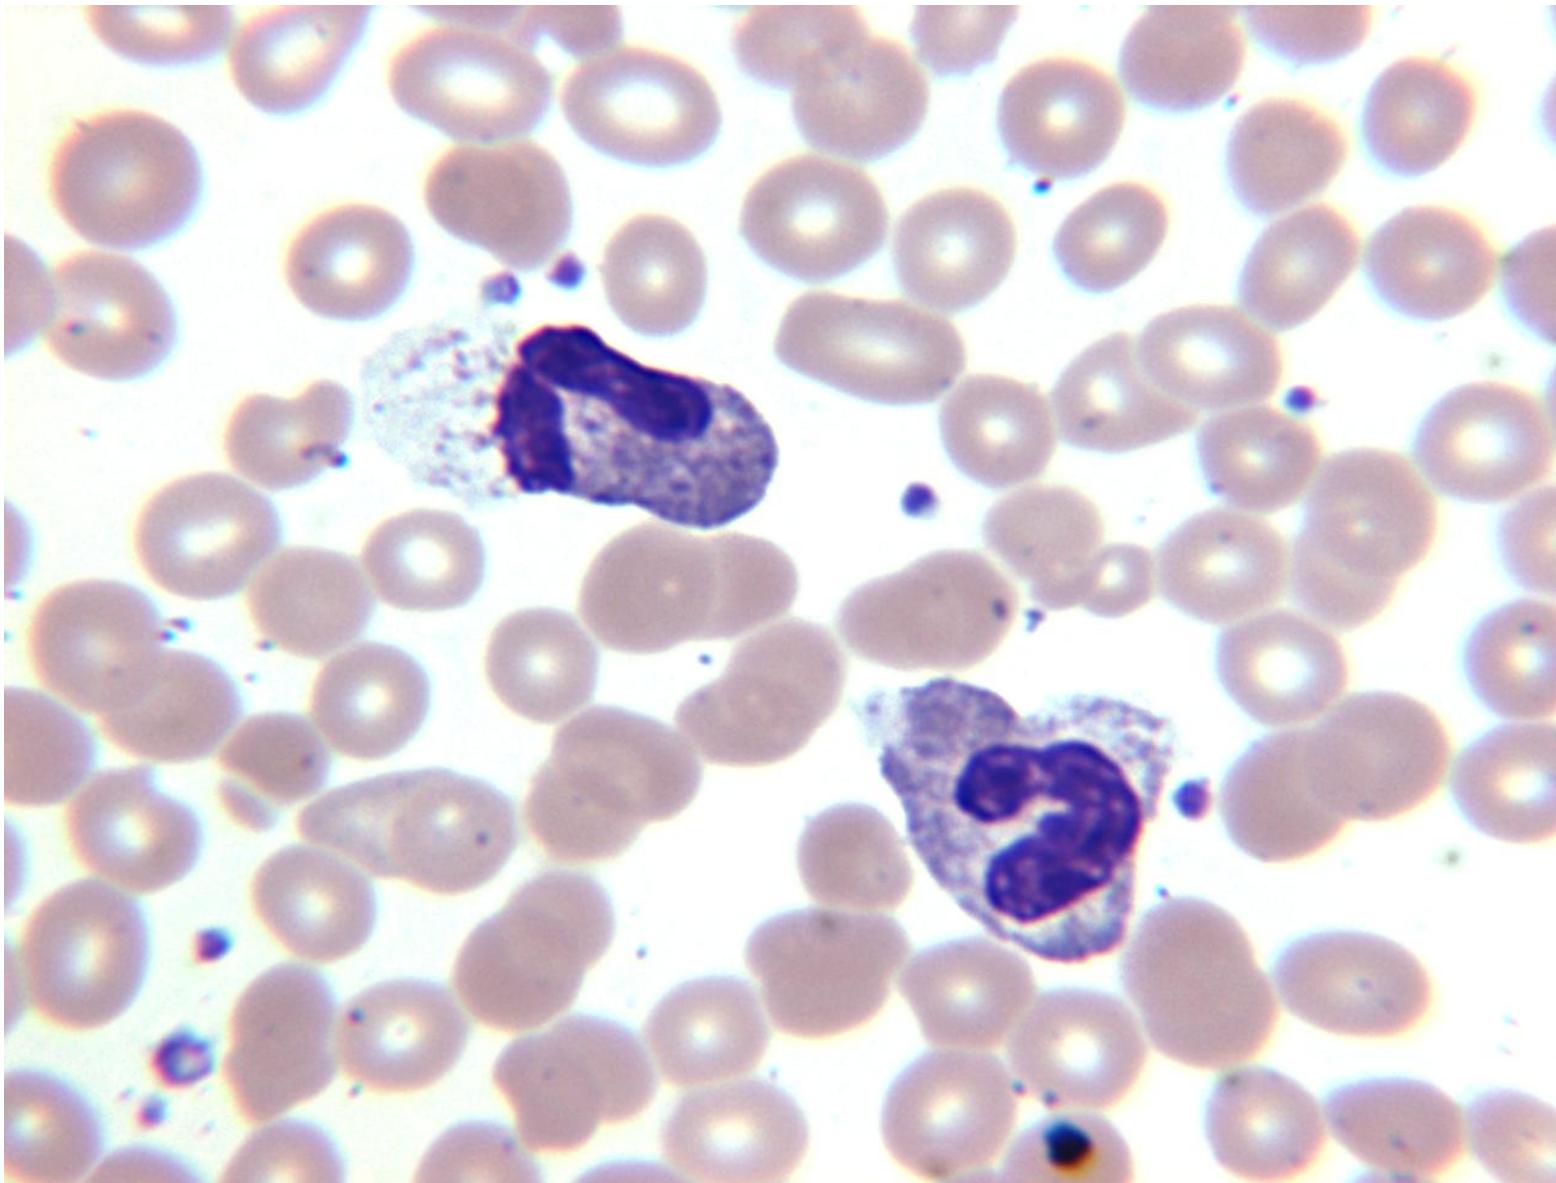

Biopsy (cont'd)

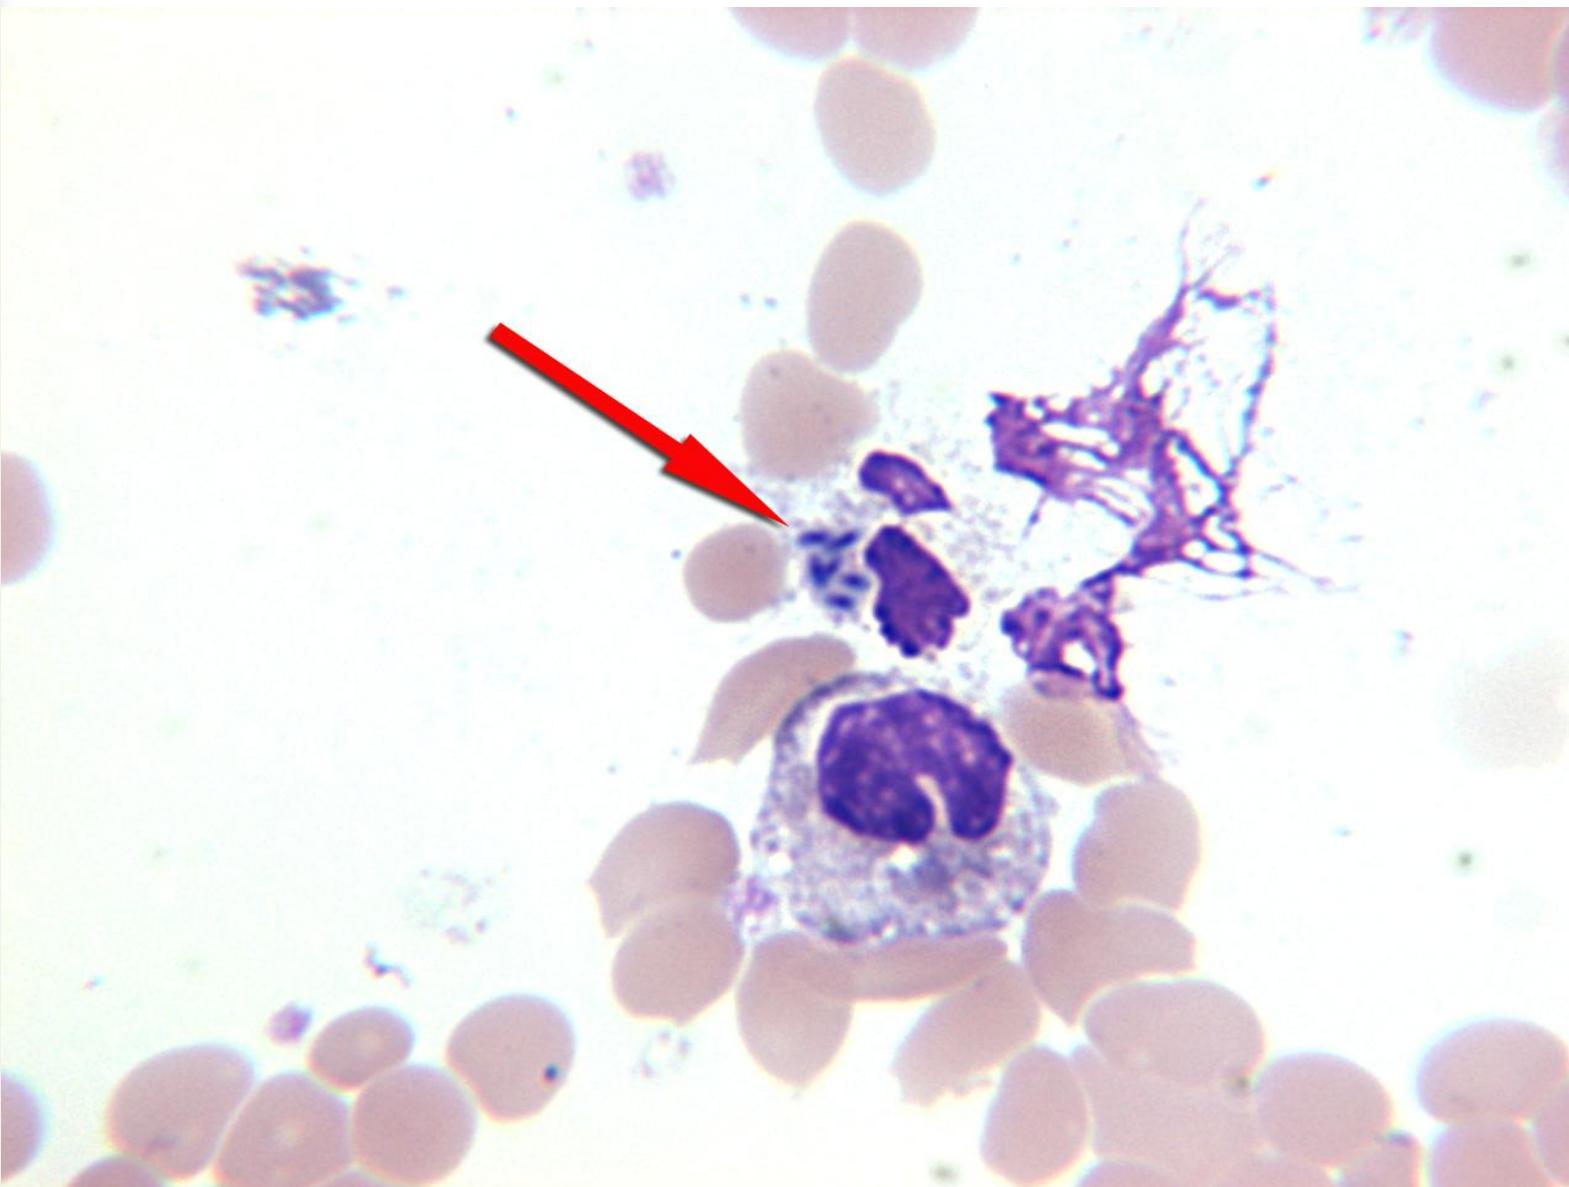

Patient Name: Rosxxxx Rosxxxx

- 31 year old female with history of NS-Hodgkin lymphoma, S/P therapy, presented with fever
- WBC 25.8, Hgb=7.81, Plt=390,000, MCV=65.9, MCH=20.7
Seg 88, Band 1, Lymph 10, Mono 1

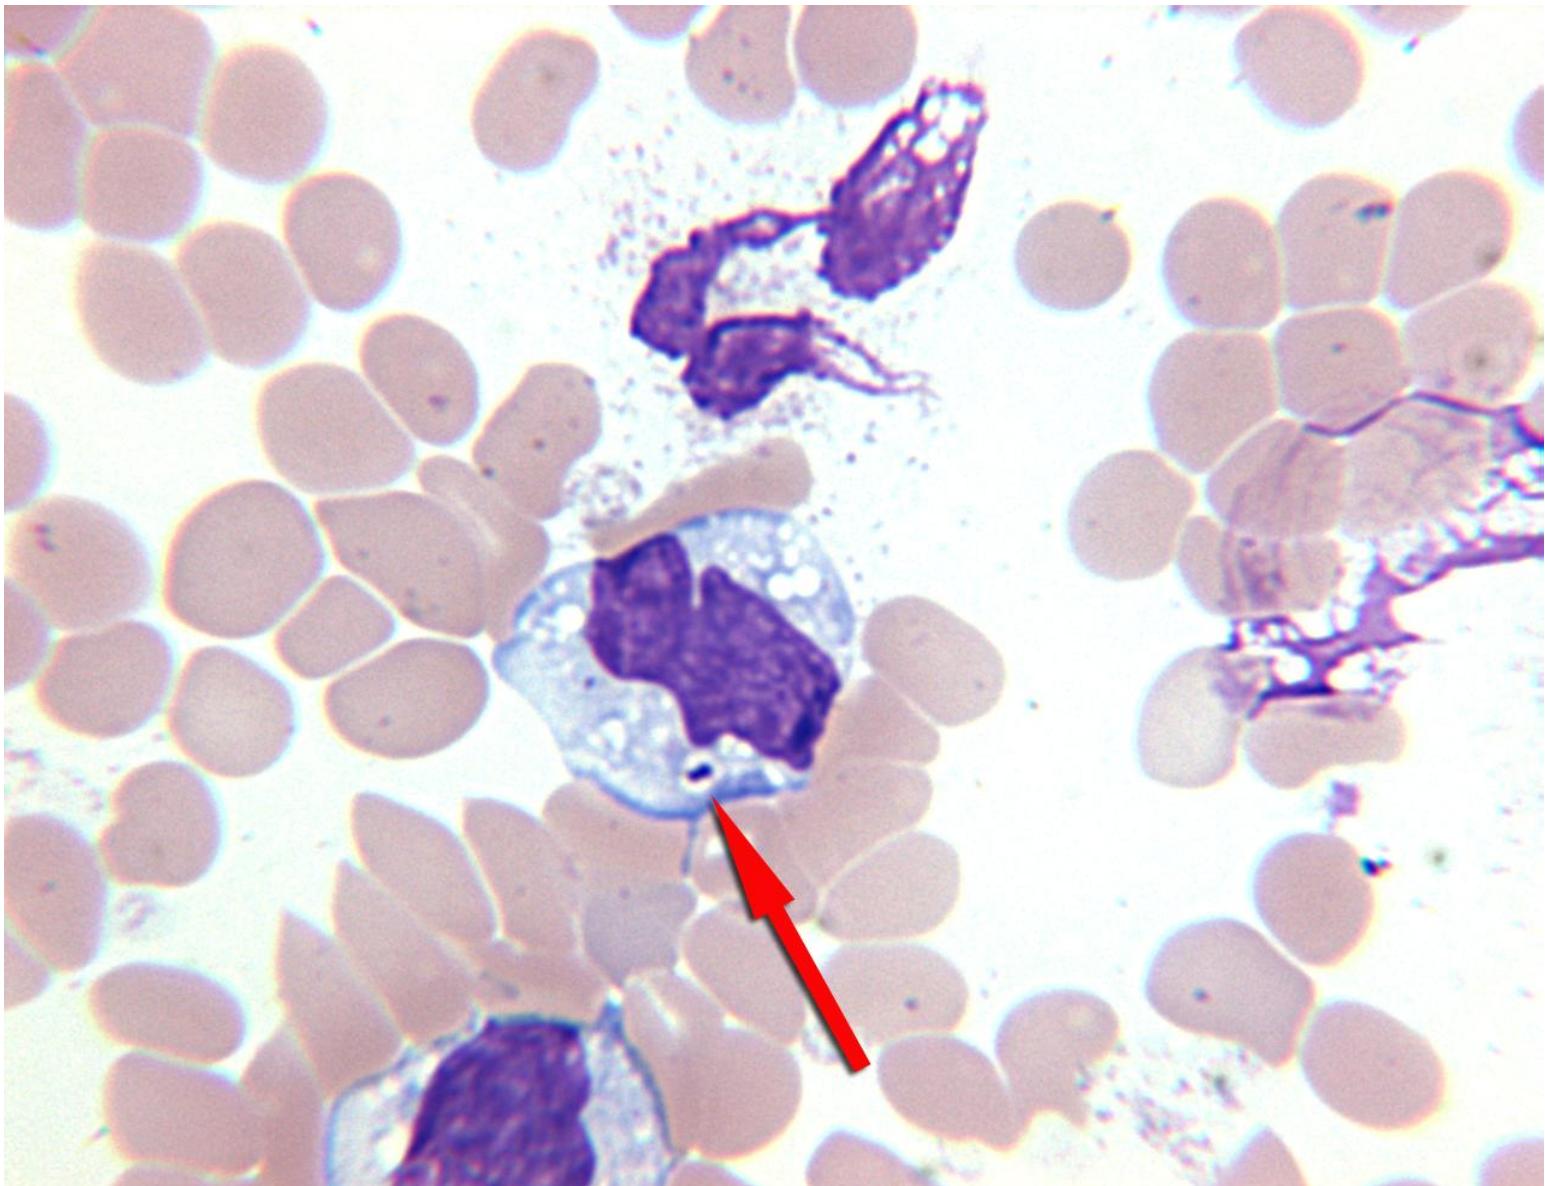

Peripheral Blood Smear

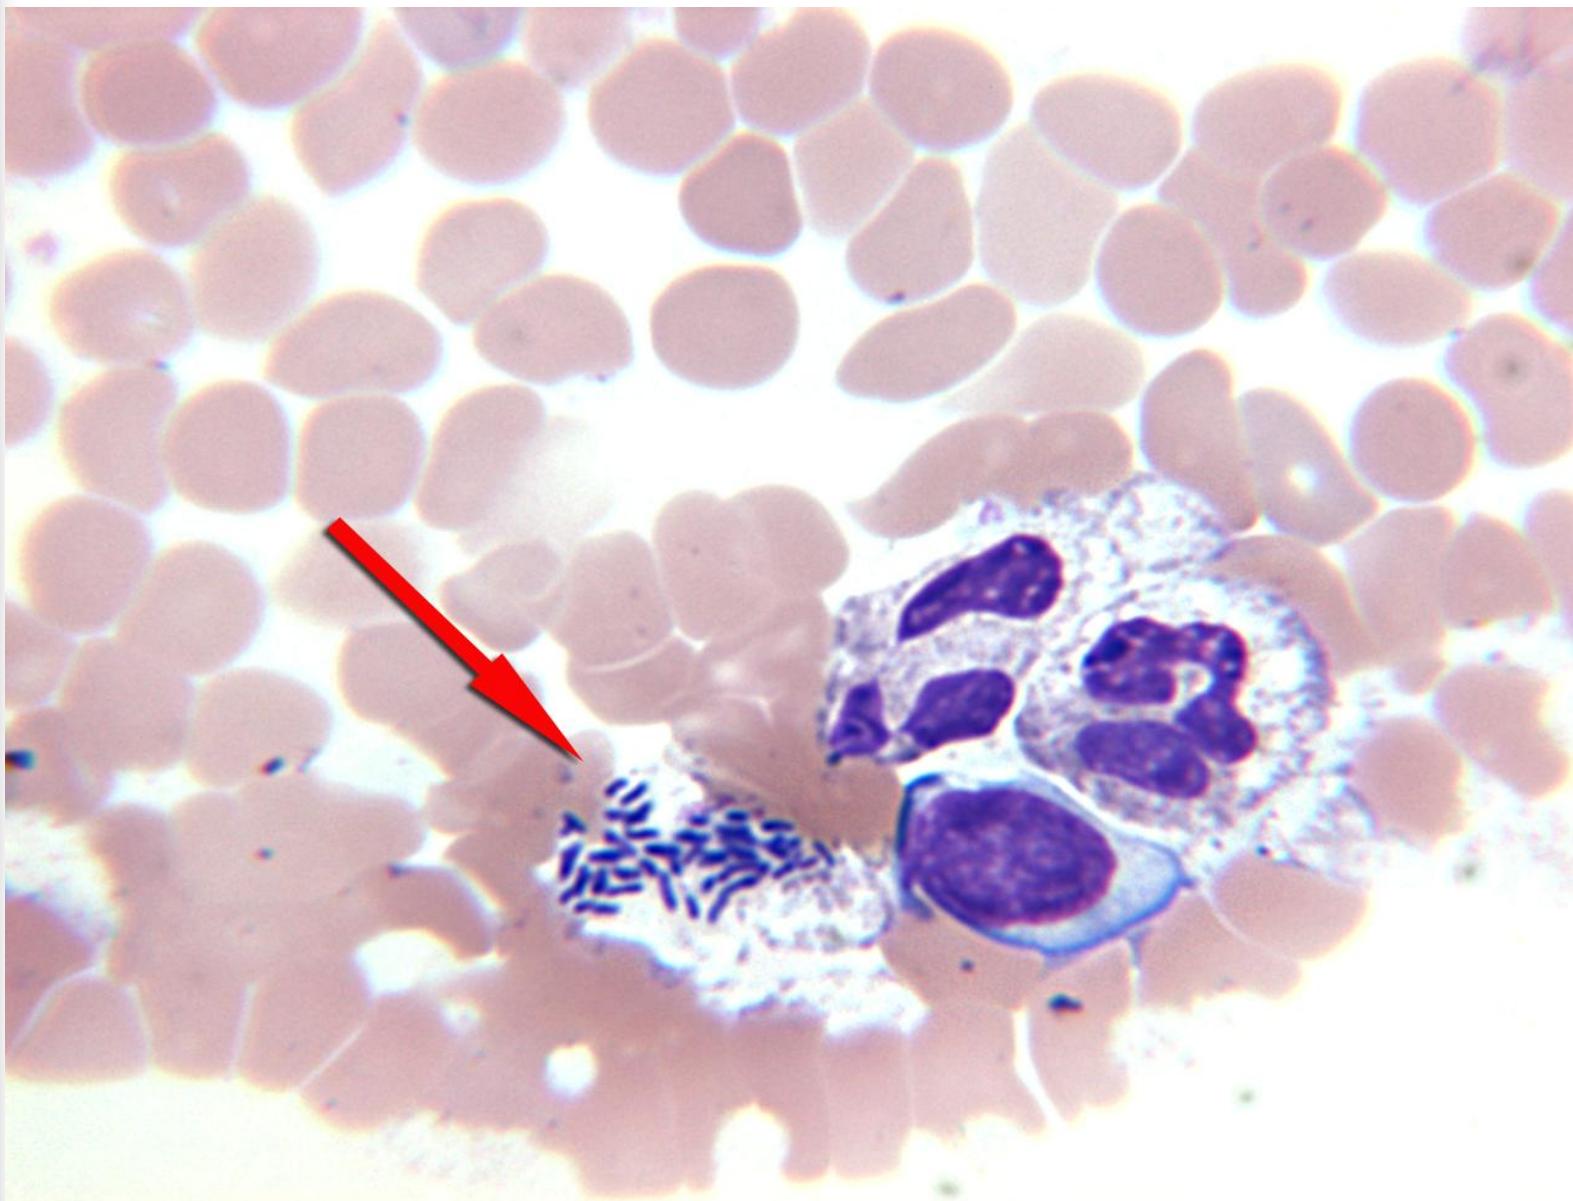

Peripheral Blood Smear (cont'd)

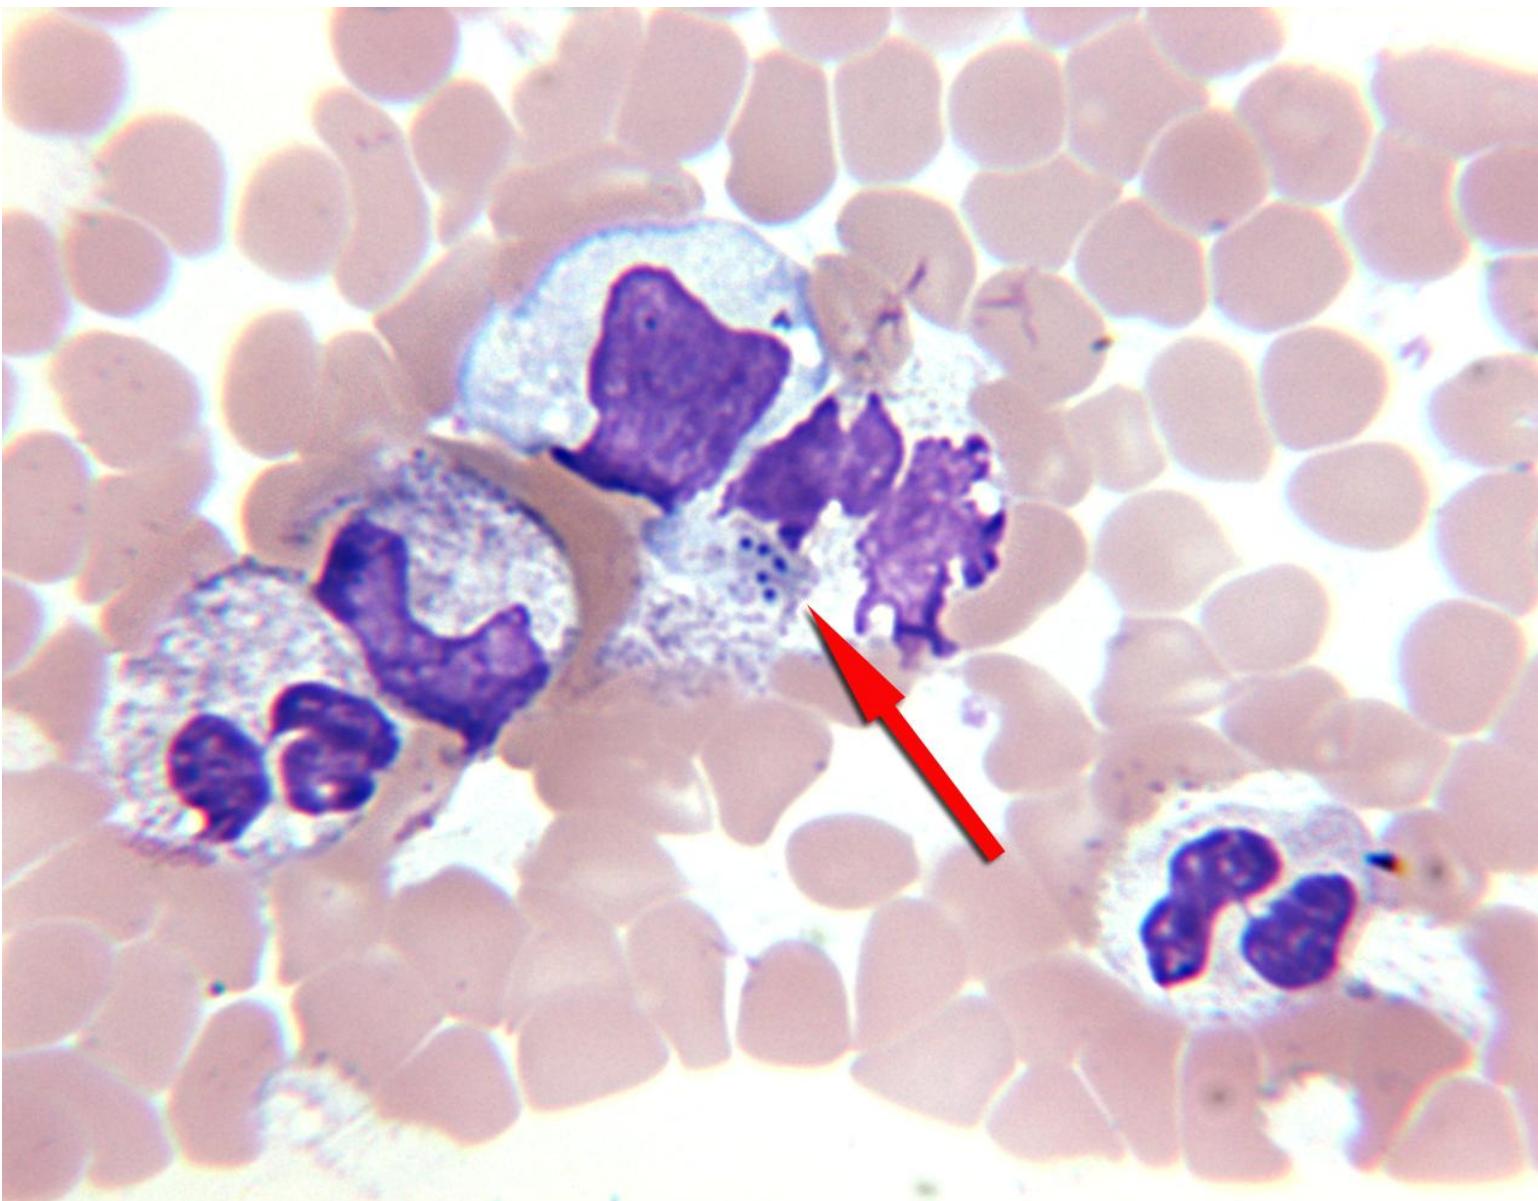

Peripheral Blood Smear (cont'd)

Blood Culture

- Results are available after findings in blood smear:
 - (1) Gr(-) bacilli: Enterobacter aerogenes
 - (2) Gr(+) cocci: Gr D. enterococcus
- Enterobacter aerogenes: part of normal enteric flora, can cause opportunistic infections (urinary, respiratory, cutaneous, occasionally sepsis and meningitis)
- Gr D. enterococcus: part of normal enteric flora, can cause: urinary tract infection, pelvic abscess, peritonitis, wound infection, endocarditis, and sepsis
- Bacteria in peripheral blood smear is uncommon even in patients with pos blood cultures. Small series did not show fatality in all cases with numerous bacterial inclusions
